**RE: Project Name, Permit No. E-21-0071, CES 20083**

Dear Staff,

On behalf of our client, Olson Brother/Provac, we are resubmitting revised plans and documents for the above referenced project. Below are the comments as written, with a response explaining how each comment was addressed.

**Permit Review Correction Letter Dated March 27, 2024**

- I. To resubmit, you must address all comments and upload a Correction Response Letter that explains what changes are being made in your resubmitted documents associated with the revision.

**Response: It has come to our attention the parking lot layout on the previous plans will not accommodate the length of the trucks which need to be parked. Therefore, we made a revision to the proposed layout to accommodate the length of the vehicles utilizing the parking area. The civil plans have been revised to update the parking layout, move the emergency overflow catch basins to the west to align with the revised drive isle location. The storm drainage report was updated to reflect the correct amount of porous pavement which is slightly less than the previous design. The Landscape Plan was revised to reflect the location of the updated islands. No other changes were needed.**

We believe we have addressed all your comments. Please review and approve at your earliest convenience. Let me know if you have any additional concerns or need additional information.

Regards,

Daniel P. Smith, PE  
Senior Project Manager
