

TECHNICAL MEMORANDUM

Prepared for: Andy Hartung, AIA McGranahan Architects 2111Pacific Avenue, Suite 100 Tacoma, WA 98402 February 28, 2024

File No.: 3359-001/3032.001

Prepared by: Grette Associates, *a division of Farallon Consulting L.L.C.* 2709 Jahn Ave. NW, Ste. H5 Gig Harbor, WA 98335-7999

Re: Stormwater Manual: Minimum Requirement 8 - Wetland Assessment and Rating

1 INTRODUCTION

Grette Associates, a division of Farallon Consulting, L.L.C., is under contract with McGranahan Architects to assist with stormwater design support associated with Pierce College's Puyallup campus parking lot expansion project. The purpose of this memorandum is to summarize the wetland assessment of the known wetland (Wetland OS-1) situated immediately east of the intersection of 27th Avenue Southeast and 7th Street Southeast (Pierce County parcel 0419032101; Figure 1).

Figure 1. Map

The City of Puyallup has requested an assessment be performed for the offsite wetland in response to stormwater design parameters outlined in the State's stormwater manual, specifically Minimum Requirement 8 (MR-8) for wetland protection.

2 METHODS

Wetland OS-1 was visually assessment to document the general characteristics of the wetland.

MR-8 requires any wetland identified to receive water from a project needs to be rated using the Washington State Department of Ecology's (Ecology) *Washington State Wetland Rating System* for Western WA - 2014 Update: Version 2 (Hruby and Yahnke 2023). As such, Wetland OS-1 was rated using the current version of Ecology's wetland rating system.

This assessment did not include a wetland delineation or preparation of critical areas report or similar document.

3 RESULTS

According to wetland rating system, Wetland OS-1 is classified as a Category III wetland that provides low habitat function (score of 5 habitat points). While this feature exhibits moderate water quality and hydrology functions, this wetland provides low habitat function largely due to its location within the landscape and being situated within a dense urban environment (Table 1; Attachment 1). As such, Wetland OS-1 likely provides limited wildlife habitat because it does not connect to undeveloped upland habitats compared to those wetland features in the vicinity of the project area (Figure 1).

Wetland OS-1 also appears to be one of several wetland features that appear to support Wildwood Creek. According to queried databases, Wildwood Creek originates just south of 37th Avenue Southeast and flows north through the Bradley Park wetland complex and through Wetland OS-1 before continuing west to Clarks Creek. During the assessment, Grette Associates did not observe a defined channel associated with Wildwood Creek.

During Grette Associates' assessment, as well as queried databases, did not result in the identification of any habitats that would support any rare, endangered, threatened, or sensitive species.

Feature	Cowardin Class	HGM Class	Water Quality	Hydrology	Habitat	Total	Category ¹
Wetland A	PAB/SS/FO	Depressional	7	6	5	18	III

 Table 1. Wetland rating and categorization summary

¹ Per Chapter 21.06 of Puyallup Municipal Code.

Per Puyallup Municipal Code (PMC) 21.06.930, assuming high land use, Category III wetlands that provide low habitat function (5 points or less) are subject to an 80-foot buffer.

If you have any questions on this assessment, please contact me at (253) 573-9300, or by email at <u>chadw@gretteassociates.com</u>.

Regards,

ht

Chad Wallin, PWS Biologist GRETTE ASSOCIATES, *a division of Farallon Consulting L.L.C.*

HGM Classification of Wetlands in Western Washington

For questions 1-7, the criteria described must apply to the entire unit being rated.

If the hydrologic criteria listed in each question do not apply to the entire unit being rated, you probably have a unit with multiple HGM classes. In this case, identify which hydrologic criteria in questions 1-7 apply, and go to Question 8.

1. Are the water levels in the entire unit usually controlled by tides except during floods?

NO – go to 2 YES – the wetland class is Tidal Fringe – go to 1.1

1.1 Is the salinity of the water during periods of annual low flow below 0.5 ppt (parts per thousand)?

NO – Saltwater Tidal Fringe (Estuarine) If your wetland can be classified as a Freshwater Tidal Fringe use the forms for Riverine wetlands. If it is Saltwater Tidal Fringe, it is an Estuarine wetland and is not scored. This method cannot be used to score functions for estuarine wetlands.

2. The entire wetland unit is flat, and precipitation is the only source (>90%) of water to it. Groundwater and surface water runoff are NOT sources of water to the unit.

NO – go to 3 YES – The wetland class is Flats If your wetland can be classified as a Flats wetland, use the form for Depressional wetlands.

3. Does the entire wetland unit meet all of the following criteria?

_____The vegetated part of the wetland is on the shores of a body of permanent open water (without any plants on the surface at any time of the year) at least 20 ac (8 ha) in size,

____At least 30% of the open water area is deeper than 6.6 ft (2 m).

- NO go to 4 YES The wetland class is Lake Fringe (Lacustrine Fringe)
- 4. Does the entire wetland unit meet all of the following criteria?
 - ____The wetland is on a slope (slope can be very gradual),
 - ____The water flows through the wetland in one direction (unidirectional) and usually comes from seeps.
 - It may flow subsurface, as sheet flow, or in a swale without distinct banks,

____The water leaves the wetland **without being impounded**.

NO – go to 5

YES - The wetland class is Slope

NOTE: Surface water does not pond in these type of wetlands except occasionally in very small and shallow depressions or behind hummocks (depressions are usually <3 ft diameter and less than 1 ft deep).

Wetland name or number Officite Wetland 1

- 5. Does the entire wetland unit meet all of the following criteria?
 - ____The unit is in a valley, or stream channel, where it gets inundated by overbank flooding from that stream or river,

____The overbank flooding occurs at least once every 2 years.

NO – go to 6 **YES** – The wetland class is **Riverine NOTE**: The Riverine unit can contain depressions that are filled with water when the river is not flooding

6. Is the entire wetland unit in a topographic depression in which water ponds, or is saturated to the surface, at some time during the year? This means that any outlet, if present, is higher than the interior of the wetland.

NO – go to 7

YES – The wetland class is Depressional

7. Is the entire wetland unit located in a very flat area with no obvious depression and no overbank flooding? The unit does not pond surface water more than a few inches. The unit seems to be maintained by high groundwater in the area. The wetland may be ditched but has no obvious natural outlet.

NO – go to 8

YES – The wetland class is Depressional

8. Your wetland unit seems to be difficult to classify and probably contains several different HGM classes. For example, seeps at the base of a slope may grade into a riverine floodplain, or a small stream within a Depressional wetland has a zone of flooding along its sides. GO BACK AND IDENTIFY WHICH OF THE HYDROLOGIC REGIMES DESCRIBED IN QUESTIONS 1-7 APPLY TO DIFFERENT AREAS IN THE UNIT (make a rough sketch to help you decide). Use the following table to identify the appropriate class to use for the rating system if you have several HGM classes present within the wetland unit being scored.

NOTE: Use this table only if the class that is recommended in the second column represents 10% or more of the total area of the wetland unit being rated. If the area of the HGM class listed in column 2 is less than 10% of the unit; classify the wetland using the class that represents more than 90% of the total area.

HGM classes within the wetland unit being rated	HGM class to use in rating
Slope + Riverine	Riverine
Slope + Depressional	Depressional
Slope + Lake Fringe	Lake Fringe
Depressional + Riverine along stream	Depressional
within boundary of depression	
Depressional + Lake Fringe	Depressional
Riverine + Lake Fringe	Riverine
Salt Water Tidal Fringe and any other	Treat as
class of freshwater wetland	ESTUARINE

If you are still unable to determine which of the above criteria apply to your wetland, or if you have **more than 2 HGM classes** within a wetland boundary, classify the wetland as Depressional for the rating. Wetland name or number Offsite Wetland 1

DEPRESSIONAL AND FLATS WETLANDS	1.1.1.2
Water Quality Functions - Indicators that the site functions to improve water quality	
D 1.0. Does the site have the potential to improve water quality?	
D 1.1. Characteristics of surface water outflows from the wetland:	2
Wetland is a depression or flat depression (QUESTION 7 on key) with no surface water leaving it (no outlet). points = 3	1
Wetland has an intermittently flowing stream or ditch, OR highly constricted permanently flowing outlet.	
points = 2	
Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowingpoints = 1Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch.points = 1	
Wetland is a flat depression (QUESTION 7 on key), whose outlet is a permanently flowing ditch. points = 1 D 1.2. The soil 2 in. below the surface (or duff layer) is true clay or true organic (use NRCS definitions). Yes = 4 No = 0	0
$\frac{1}{1} = \frac{1}{1} = \frac{1}$	0
D 1.3. Characteristics and distribution of persistent plants (Emergent, Scrub-shrub, and/or Forested Cowardin classes):	3
Wetland has persistent, ungrazed plants > 95% of area points = 5	\mathcal{O}
Wetland has persistent, ungrazed plants > ½ of area points = 3	
Wetland has persistent, ungrazed plants $\geq 1/10$ of area points = 1	
Wetland has persistent, ungrazed plants $<^1/_{10}$ of areapoints = 0	
D 1.4. Characteristics of seasonal ponding or inundation:	4
This is the area that is ponded for at least 2 months. See description in manual.	I I
Area seasonally ponded is > ½ total area of wetland points = 4	
Area seasonally ponded is \geq ¼ total area of wetland points = 2	
Area seasonally ponded is < ¼ total area of wetland points = 0	
Total for D 1 Add the points in the boxes above	9
Rating of Site Potential If score is: $12-16 = H$ $\chi_6-11 = M$ $-0-5 = L$ Record the rating on the	first page
D 2.0. Does the landscape have the potential to support the water quality function of the site?	10.00
D 2.1. Does the wetland unit receive stormwater discharges? Yes = 1 No = 0	1
D 2.2. ls > 10% of the area within 150 ft of the wetland in land uses that generate pollutants? Yes = 1 No = 0	1
D 2.3. Are there septic systems within 250 ft of the wetland? Yes = 1 No = 0	0
D 2.4. Are there other sources of pollutants coming into the wetland that are not listed in questions D 2.1-D 2.3?	0
SourceYes = 1 No = 0 Total for D 2 Add the points in the boxes above	
	2
Rating of Landscape Potential If score is: 3 or 4 = H 1 or 2 = M 0 = L Record the rating on the	first page
D 3.0. Is the water quality improvement provided by the site valuable to society?	
D 3.1. Does the wetland discharge directly (i.e., within 1 mi) to a stream, river, lake, or marine water that is on the 303(d) list? Yes = 1 No = 0	0
D 3.2. Is the wetland in a basin or sub-basin where an aquatic resource is on the 303(d) list? Yes = 1 No = 0	1
D 3.3. Has the site been identified in a watershed or local plan as important for maintaining water quality? (Answer YES if there is a TMDL in development or in effect for the basin in which the unit is found.) Yes = 2 No = 0	2
Total for D 3 Add the points in the boxes above	3

Wetland name or number OFFSite Wetland 1

DEPRESSIONAL AND FLATS WETLANDS Hydrologic Functions - Indicators that the site functions to reduce flooding and stream degradat	ion
D 4.0. Does the site have the potential to reduce flooding and erosion?	111-1-
D 4.1. Characteristics of surface water outflows from the wetland:	2
Wetland is a depression or flat depression with no surface water leaving it (no outlet) points = 4	.1
Wetland has an intermittently flowing stream/ditch, OR highly constricted permanently flowing outlet points = 2	
Wetland is a flat depression (question 7 on key), whose outlet is a permanently flowing ditch points = 1	
Wetland has an unconstricted, or slightly constricted, surface outlet that is permanently flowing points = 0	
D 4.2. Depth of storage during wet periods: Estimate the height of ponding above the bottom of the outlet. For	_
wetlands with no outlet, measure from the surface of permanent water or if dry, the deepest part.	5
Marks of ponding are 3 ft or more above the surface or bottom of outlet points = 7	2
Marks of ponding between 2 ft to < 3 ft from surface or bottom of outlet points = 5	
Marks are at least 0.5 ft to < 2 ft from surface or bottom of outlet points = 3	
The wetland is a "headwater" wetland points = 3	
Wetland is flat but has small depressions on the surface that trap water points = 1	
Marks of ponding less than 0.5 ft (6 in) points = 0	
D 4.3. Contribution of the wetland to storage in the watershed: Estimate the ratio of the area of upstream basin	3
contributing surface water to the area of the wetland unit itself.	2
The area of the basin is less than 10 times the area of the unit points = 5	
The area of the basin is 10 to 100 times the area of the unit points = 3	
The area of the basin is more than 100 times the area of the unit points = 0	
Entire wetland is in the Flats class points = 5	
Total for D 4 Add the points in the boxes above	10
Rating of Site Potential If score is: $12-16 = H \times 6-11 = M = 0-5 = L$ Record the rating on the	first page
D 5.0. Does the landscape have the potential to support hydrologic functions of the site?	
D 5.1. Does the wetland receive stormwater discharges? Yes = 1 No = 0	1
D 5.2. Is >10% of the area within 150 ft of the wetland in land uses that generate excess runoff? Yes = 1 No = 0	1
D 5.3. Is more than 25% of the contributing basin of the wetland covered with intensive human land uses (residential at	1
>1 residence/ac, urban, commercial, agriculture, etc.)? Yes = 1 No = 0	1
Total for D 5 Add the points in the boxes above	3
Rating of Landscape Potential If score is: X_3 = H1 or 2 = M0 = L Record the rating on the	first page
D 6.0. Are the hydrologic functions provided by the site valuable to society?	
D 6.1. Is the unit in a landscape that has flooding problems? Choose the description that best matches conditions	0
around the wetland unit being rated. Do not add points. Choose the highest score if more than one condition is	
<u>met</u> .	
The wetland captures surface water that would otherwise flow downgradient into areas where flooding has	
damaged human or natural resources (e.g., houses or salmon redds):	
• Flooding occurs in a sub-basin that is immediately downgradient of unit. points = 2	
• Surface flooding problems are in a sub-basin farther downgradient. points = 1	
• Flooding from groundwater is an issue in the sub-basin. points = 1	
 The existing or potential outflow from the wetland is so constrained by human or natural conditions that the united stand by the united constant much space that flead for a low for a standard second standard second standard second standard second second standard second standard second standard second standard second second standard second standard second standard second standard second standard second standard second second standard second standard second standard second standard second second standard second standard second standard second standard second second standard second standard second standard second standard second second standard second standard second standard second standard second second standard second standard second standard second standard second second standard second standard second standard second standard second second standard second standard second standard second standard second second standard second standard second standard second standard second standard second second standard second standard second standard second standard second second standard second standard second standard second standard second seco	
 water stored by the wetland cannot reach areas that flood. <i>Explain why</i> points = 0 There are no problems with flooding downstream of the wetland.

Wetland Rating System for Western WA: 2014 Update Rating Form – Version 2, July 2023 Wetland name or number OFFSite Wetland 1

These questions apply to wetlands of all HGM classes.	
HABITAT FUNCTIONS - Indicators that site functions to provide important habitat	
H 1.0. Does the site have the potential to provide habitat?	
H 1.1. Structure of plant community: Indicators are Cowardin classes and strata within the Forested class. Check the Cowardin plant classes in the wetland. Up to 10 patches may be combined for each class to meet the threshold of ¼ ac if the unit is at least 2.5 ac, or more than 10% of the unit if it is smaller than 2.5 ac.	4
Aquatic bed 4 structures or more: points = 4	
Emergent 3 structures: points = 2	
Scrub-shrub (areas where shrubs have > 30% cover) 2 structures: points = 1	
_X_Forested (areas where trees have > 30% cover) 1 structure: points = 0	
If the unit has a Forested class, check if:	
The Forested class has 3 out of 5 strata (canopy, sub-canopy, shrubs, herbaceous, moss/groundcover) that	
each cover 20% within the Forested polygon	
H 1.2. Hydroperiods	2
Check the types of water regimes (hydroperiods) present within the wetland. The water regime has to cover	
more than 10% of the wetland if the unit is < 2.5 ac, or ¼ ac if the unit is at least 2.5 ac to count (see text for descriptions of hydroperiods).	
V i i i i i i i i i i i i i i i i i i i	
A Permanently flooded or inundated 4 or more types present: points = 3 A Seasonally flooded or inundated 3 types present: points = 2	
Occasionally flooded or inundated 2 types present: points = 1	
Permanently flowing stream or river in, or adjacent to, the wetland	
Intermittently or seasonally flowing stream in, or adjacent to, the wetland	
Lake Fringe wetland 2 points	
Cate Finge wetland 2 points 2 points	
H 1.3. Richness of plant species	Λ
Count the number of plant species in the wetland that cover at least 10 ft ² .	1
Different patches of the same species can be combined to meet the size threshold and you do not have to	
name the species. Do not include Eurasian milfoil, reed canarygrass, purple loosestrife, Canada thistle	
If you counted: > 19 species points = 2	
5 - 19 species points = 1	
< 5 species points = 0	
H 1.4. Interspersion of habitats	2
Decide from the diagrams below whether interspersion among Cowardin plants classes (described in H 1.1), or	3
the classes and unvegetated areas (can include open water or mudflats) is high, moderate, low, or none. If you	
have four or more plant classes or three classes and open water, the rating is always high.	
None = 0 points Low = 1 point Moderate = 2 points	
All three diagrams in this row are High = 3 points	

Wetland Rating System for Western WA: 2014 Update Rating Form – Version 2, July 2023 Wetland name or number <u>Offsit</u>c Wetland 1

H 1.5. Special habitat features:	2
Check the habitat features that are present in the wetland. The number of checks is the number of points.	5
Large, downed, woody debris within the wetland (> 4 in. diameter and 6 ft long).	
X Standing snags (dbh > 4 in.) within the wetland	
Undercut banks are present for at least 6.6 ft (2 m) and/or overhanging plants extend at least 3.3 ft (1 m) over open water or a stream (or ditch) in, or contiguous with the wetland, for at least 33 ft (10 m)	
Stable steep banks of fine material that might be used by beaver or muskrat for denning (> 30 degree	
slope) OR signs of recent beaver activity are present (cut shrubs or trees that have not yet weathered where wood is exposed)	
_XAt least ¼ ac of thin-stemmed persistent plants or woody branches are present in areas that are	
permanently or seasonally inundated (structures for egg-laying by amphibians)	
Invasive plants cover less than 25% of the wetland area in every stratum of plants (see H 1.1 above for the	
list of strata and H 1.5 in the manual for the list of aggressive plant species)	
Total for H 1 Add the points in the boxes above	13
Rating of Site Potential If score is:15-18 = H X_7-14 = M0-6 = L Record the rating on	the first page

H 2.0. Does the landscape have the potential to support the habitat functions of the site?	
H 2.1. Accessible habitat (include only habitat polygons accessible from the wetland. $Calculate: %$ relatively undisturbed habitat $O + [(% moderate and low intensity land uses)/2] O = O %Total accessible habitat is:A all available habitat polygons arc> 1/3 (33.3%) of 1 km PolygonSeparated from the wetland whit by20-33% of 1 km PolygonAll available holdsing; paved10-19% of 1 km PolygonAll available residential roads; or by sy 2-4 lanc< 10% of 1 km Polygon$	0
H 2.2. Total habitat in 1 km Polygon around the wetland.	1
<i>Calculate:</i> % relatively undisturbed habitat $\frac{28}{10}$ + [(% moderate and low intensity land uses)/2] $\frac{4}{10}$ = $\frac{32}{100}$ %	
Total habitat > 50% of Polygon points = 3	
Total habitat 10-50% and in 1-3 patches points = 2	
Total habitat 10-50% and > 3 patches points = 1	
Total habitat < 10% of 1 km Polygon points = 0	
H 2.3. Land use intensity in 1 km Polygon:	-2
> 50% of 1 km Polygon is high intensity land use points = (- 2)	
≤ 50% of 1 km Polygon is high intensity points = 0	
Total for H 2 Add the points in the boxes above	-1

Rating of Landscape Potential If score is: ___4-6 = H __ _1-3 = M <u>X</u><1=L Record the rating on the first page

H 3.0. Is the habitat provided by the site valuable to society?	
H 3.1. Does the site provide habitat for species valued in laws, regulations, or policies? Choose only the highest score that applies to the wetland being rated.	1
Site meets ANY of the following criteria: points = 2	
 It has 3 or more Priority Habitats within 100 m (see next page) 	
— It provides habitat for Threatened or Endangered species (any plant or animal on the state or federal lists)	
It is mapped as a location for an individual WDFW Priority Species	
— It is a Wetland of High Conservation Value as determined by the Department of Natural Resources data	
— It has been categorized as an important habitat site in a local or regional comprehensive plan, in a	
Shoreline Master Plan, or in a watershed plan	
Site has 1 or 2 Priority Habitats (listed on next page) within 100 m points = 1	0.1
Site does not meet any of the criteria above points = 0	
Rating of Value If score is:2 = H 0 = L Record the rating of Value If score is:2 = H	n the first page

Wetland Rating System for Western WA: 2014 Update Rating Form – Version 2, July 2023

Wetland name or number OFFSitc Wetland 1

WDFW Priority Habitats

See complete descriptions of Priority Habitats listed by WDFW, and the counties in which they can be found, in: Washington Department of Fish and Wildlife. 2008 (current year, as revised). <u>Priority Habitat and Species List</u>.¹³³ This list was updated for consistency with guidance from WDFW.

This question is independent of the land use between the wetland unit and the Priority Habitat. All vegetated wetlands are by definition a Priority Habitat but are not included in this list because they are addressed by this rating system.

Count how many of the following Priority Habitats are within 330 ft (100 m) of the wetland unit:

- --- Aspen Stands: Pure or mixed stands of aspen greater than 1 ac (0.4 ha).
- **Biodiversity Areas and Corridors**: Areas of habitat that are relatively important to various species of native fish and wildlife. This habitat automatically counts if mapped on the PHS online map within 100m of the wetland. If not mapped, a determination can be made in the field.
- --- Caves: A naturally occurring cavity, recess, void, or system of interconnected passages under the earth in soils, rock, ice, or other geological formations and is large enough to contain a human.
- --- Cliffs: Greater than 25 ft (7.6 m) high and occurring below 5000 ft elevation.
- Fresh Deepwater: Lands permanently flooded with freshwater, including environments where surface water is permanent and often deep, so that water, rather than air, is the principal medium within which the dominant organisms live. Substrate does not support emergent vegetation. Do not select if Instream habitat is also present, or if the entire Deepwater feature is included in the wetland unit being rated (such as a pond with a vegetated fringe).
- Instream: The combination of physical, biological, and chemical processes and conditions that interact to provide functional life history requirements for instream fish and wildlife resources. Do not select if Fresh Deepwater habitat is also present.
- Nearshore: Relatively undisturbed nearshore habitats. These include Coastal Nearshore, Open Coast Nearshore, and Puget Sound Nearshore.
- Old-growth/Mature forests: <u>Old-growth west of Cascade crest</u> Stands of at least 2 tree species, forming a multi-layered canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) > 32 in. (81 cm) diameter at breast height (dbh) or > 200 years of age. <u>Mature forests</u> Stands with average diameters exceeding 21 in. (53 cm) dbh; crown cover may be less than 100%; decay, decadence, numbers of snags, and quantity of large downed material is generally less than that found in old-growth; 80-200 years old west of the Cascade crest.

 Wetland Rating System for Western WA: 2014 Update
 Rating Form – Version 2, July 2023

Wetland name or number Offsite Wetland 1

- Oregon White Oak: Woodland stands of pure oak or oak/conifer associations where canopy coverage of the oak component is important. For single oaks or oak stands <0.4 ha in urban areas, <u>WDFW's</u> <u>Management Recommendations for Oregon White Oak</u>¹³⁴ provides more detail for determining if they are Priority Habitats
- --- **Riparian:** The area adjacent to freshwater aquatic systems with flowing or standing water that contains , elements of both aquatic and terrestrial ecosystems which mutually influence each other.
- Snags and Logs: Trees are considered snags if they are dead or dying and exhibit sufficient decay characteristics to enable cavity excavation/use by wildlife. Priority snags have a diameter at breast height of > 20 in. (51 cm) in western Washington and are > 6.5 ft (2 m) in height. Priority logs are > 12 in. (30 cm) in diameter at the largest end, and > 20 ft (6 m) long.
- Talus: Homogenous areas of rock rubble ranging in average size 0.5 6.5 ft (0.15 2.0 m), composed of basalt, andesite, and/or sedimentary rock, including riprap slides and mine tailings. May be associated with cliffs.
- ---- Westside Prairies: Herbaceous, non-forested plant communities that can either take the form of a dry prairie or a wet prairie.

 Wetland Rating System for Western WA: 2014 Update
 Rating Form – Version 2, July 2023

CATEGORIZATION BASED ON SPECIAL CHARACTERISTICS

Wetland Type	Category
Check off any criteria that apply to the wetland. Circle the category when the appropriate criteria are met.	
SC 1.0. Estuarine wetlands	
Does the wetland meet the following criteria for Estuarine wetlands?	
— The dominant water regime is tidal,	
Vegetated, and	
— With a salinity greater than 0.5 ppt Yes – Go to SC 1.1 No= Not an estuarine wetland	
SC 1.1. Is the wetland within a National Wildlife Refuge, National Park, National Estuary Reserve, Natural Area Preserve, State Park or Educational, Environmental, or Scientific Reserve designated under WAC 332-30-151?	
Yes = Category I No – Go to SC 1.2	Cat. I
SC 1.2. Is the wetland unit at least 1 ac in size and meets at least two of the following three conditions?	
— The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less	
than 10% cover of non-native plant species. If non-native species are <i>Spartina</i> , see chapter 4.8 in the manual.	Cat. I
— At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un-	
mowed grassland.	Cat. II
— The wetland has at least two of the following features: tidal channels, depressions with open water, or	
contiguous freshwater wetlands. Yes = Category I No = Category II	
SC 2.0. Wetlands of High Conservation Value (WHCV)	
SC 2.1. Does the wetland overlap with any known or historical rare plant or rare & high-quality ecosystem polygons	Cott
on the WNHP Data Explorer? ¹³⁵ Yes = Category I No – Go to SC 2.2	Cat. I
SC 2.2. Does the wetland have a rare plant species, rare ecosystem (e.g., plant community), or high-quality common ecosystem that may qualify the site as a WHCV? Contact WNHP for resources to help determine the	
presence of these elements.	
Yes – Submit data to WA Natural Heritage Program for determination, ¹³⁶ Go to SC 2.3 No = Not a WHCV	
SC 2.3. Did WNHP review the site within 30 days and determine that it has a rare plant or ecosystem that meets their criteria?	
Yes = Category I No = Not a WHCV	
SC 3.0. Bogs	
Does the wetland (or any part of the unit) meet both the criteria for soils and vegetation in bogs? Use the key	
below. If you answer YES, you will still need to rate the wetland based on its functions.	
SC 3.1. Does an area within the wetland unit have organic soil horizons, either peats or mucks, that compose 16 in.	
or more of the first 32 in. of the soil profile? Yes – Go to SC 3.3 No – Go to SC 3.2	
SC 3.2. Does an area within the wetland unit have organic soils, either peats or mucks, that are less than 16 in. deep over bedrock, or an impermeable hardpan such as clay or volcanic ash, or that are floating on top of a lake or	
pond? Yes – Go to SC 3.3 No = Not a bog	
SC 3.3. Does an area with peats or mucks have more than 70% cover of mosses at ground level, AND at least a 30%	
cover of plant species listed in Table 4? Yes = Category I bog No – Go to SC 3.4	
NOTE: If you are uncertain about the extent of mosses in the understory, you may substitute that criterion by	
measuring the pH of the water that seeps into a hole dug at least 16 in. deep. If the pH is less than 5.0 and	Cont 1
the plant species in Table 4 are present, the wetland is a bog.	Cat. I
SC 3.4. Is an area with peats or mucks forested (> 30% cover) with Sitka spruce, subalpine fir, western red cedar, western hemlock, lodgepole pine, quaking aspen, Engelmann spruce, or western white pine, AND any of the	
species (or combination of species) listed in Table 4 provide more than 30% of the cover under the canopy?	
Yes = Category I bog No = Not a bog

Wetland Rating System for Western WA: 2014 Update

Rating Form – Version 2, July 2023

SC 4.0. Forested Wetlands	
Does the wetland have at least <u>1 contiguous acre</u> of forest that meets one of these criteria for the WA Department of Fish and Wildlife's forests as Priority Habitats? <i>If you answer YES, you will still need to rate</i> <i>the wetland based on its functions.</i> — Old-growth forests (west of Cascade crest): Stands of at least two tree species, forming a multi-layered	
canopy with occasional small openings; with at least 8 trees/ac (20 trees/ha) that are at least 200 years of age OR have a diameter at breast height (dbh) of 32 in. (81 cm) or more.	
— Mature forests (west of the Cascade Crest): Stands where the largest trees are 80- 200 years old OR the	
species that make up the canopy have an average diameter (dbh) exceeding 21 in. (53 cm).	
Yes = Category I No = Not a forested wetland for this section	Cat. I
SC 5.0. Wetlands in Coastal Lagoons	
Does the wetland meet all of the following criteria of a wetland in a coastal lagoon?	
 The wetland lies in a depression adjacent to marine waters that is wholly or partially separated from marine waters by sandbanks, gravel banks, shingle, or, less frequently, rocks 	
— The lagoon in which the wetland is located contains ponded water that is saline or brackish (> 0.5 ppt) during most of the year in at least a portion of the lagoon (needs to be measured near the bottom)	
— The lagoon retains some of its surface water at low tide during spring tides	
Yes – Go to SC 5.1 No = Not a wetland in a coastal lagoon	Cat. I
SC 5.1. Does the wetland meet all of the following three conditions?	Cat. I
The wetland is relatively undisturbed (has no diking, ditching, filling, cultivation, grazing), and has less than 20% cover of aggressive, opportunistic plant species (see list of species in H 1.5 in the manual).	
— At least ¾ of the landward edge of the wetland has a 100 ft buffer of shrub, forest, or un-grazed or un- mowed grassland.	Cat. II
— The wetland is larger than $1/_{10}$ ac (4350 ft ²)	
Yes = Category I No = Category II	
SC 6.0. Interdunal Wetlands	
Is the wetland west of the 1889 line (also called the Western Boundary of Upland Ownership or WBUO)? <i>If</i> you answer YES, you will still need to rate the wetland based on its habitat functions.	
In practical terms that means the following geographic areas: — Long Beach Peninsula: Lands west of SR 103	
 — Grayland-Westport: Lands west of SR 105 	Cat I
 Ocean Shores-Copalis: Lands west of SR 115 and SR 109 and Ocean Shores Blvd SW, including lands west of E. Oceans Shores Blvd SW. 	
Yes – Go to SC 6.1 No = Not an interdunal wetland for rating	
	Cat. II
SC 6.1. Is the wetland 1 ac or larger and scores an 8 or 9 for the habitat functions on the form (rates H,H,H or H,H,M	
for the three aspects of function)? Yes = Category I No – Go to SC 6.2 SC 6.2. Is the wetland 1 ac or larger, or is it in a mosaic of wetlands that is 1 ac or larger?	Cat. III
Yes = Category II No – Go to SC 6.3	
SC 6.3. Is the unit between 0.1 and 1 ac, or is it in a mosaic of wetlands that is between 0.1 and 1 ac? Yes = Category III No = Category IV	Cat. IV
Category of wetland based on Special Characteristics	
If you answered No for all types, enter "Not Applicable" on Summary Form
