RE: Storm Drainage Improvements Certification  
Homewood Suites  
Permit Tracking No. E-20-0070  
Our Job No. 22507

Dear Jamie:

Our office conducted an as-built survey of the installed drainage improvements for the above-referenced project in July 2025. I have reviewed this surveyed information and confirmed that these portions of the drainage system were constructed in compliance with the approved plans.

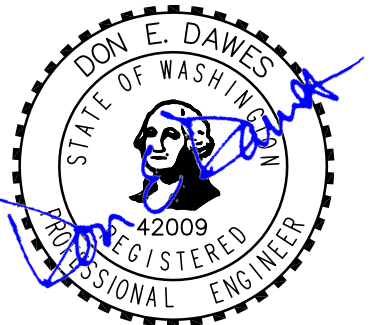

Our survey crew could not as-built portions of the drainage system, such as the infiltration chambers and storm filters. Therefore, the client provided photos showing the installation of the StormTech Chambers which I have attached for reference. They also provided the attached email with information on the number of filter cartridges and media type installed for the water quality filters. Based on these photos and confirmation on the storm filters, these drainage features also appear to have been constructed in compliance with the approved plans.

Based on the above information, and the attached documents, this letter is to certify that the storm drainage improvements designed for the above-referenced project have been installed in compliance with the civil engineering plans approved by the City on November 15, 2021.

If you have any questions or need any additional information from me, please let me know.

Respectfully,

Don E. Dawes, P.E.  
Senior Civil Project Manager

The filters were installed after paving by 10 days, so we are looking at install on the 13<sup>th</sup> of May this year. There are 10 filters. Media type ZPG
