STRUCTURAL CALCULATIONS FOR:

McDonald's #43903

Puyallup, WA

MONUMENT

WIND DATA

Building Code	2021 IBC	Importance Factor, I	1.0	Damping Ratio, β	0.005		
Wind Load Criteria	ASCE 7-16	Directionality Factor, K_d (2)	0.85	Natural Frequency, n_1	2.10 Hz		
Wind Speed, V	110 mph	Topography Factor, K_{zt}	1.0	Gust Effect Factor, G	0.85		
Exposure Category	C	Base Pressure, $\gamma(q_z/K_z)$	15.8 psf	ASD Wind Load Factor, γ (3)	0.6		
Wind Pressure Override per Jurisdiction Requirement	0 psf						

DEFLECTION ANALYSIS

Deflection Limit		H/60
Deflection at 0.7*W		1.05 in
Deflection Ratio	✓	H/115

Notes: *(1) Loading values in chart below are based upon average K_z values for each segment. Actual values are calculated on hidden sheet using derived V-M equations. Chart is provided for information purposes only.*
(2) Wind directionality (K_d) factor is 0.95 for Single Pole (Round) segments instead of 0.85. The C_f value from Fig. 6-21 has been increased by 0.95/0.85 to account for this variation.
(3) Wind pressures listed below have already been multiplied by the ASD Wind Load Factor, γ.

FOUNDATION DESIGN

Footing Loads

Axial, P_a	0.9 k
Moment, M_a	7.1 k-ft
Shear, V_a	1.3 k
Base Column to Footing Connection Type	Base Plate

Footing and Soils Data

Concrete Strength, f'_c	2500 psi
Materials Class	5
Sign or Flagpole	Yes
Allowable Vertical Bearing Pressure	1500 psf
Allowable Lateral Bearing Pressure	200 psf/ft

Vertical Slab Footing

Constrained Base	No
Width, b	8.00 ft
Thickness, t	2.00 ft
Selected Bar Size	#5
Top Depth to Ignore for Poor Soil Conditions	0.00 ft
Depth Calculation Status	OK
Effective Height, h (ft)	5.52 ft
S1	0.25
S3	0.75
A	1.45 ft
Assumed Depth (not including ignored top depth)	3.77 ft
Required Depth (not including ignored top depth)	✓ 3.77 ft
Concrete Strength, f'_c	2500 psi
Minimum Thickness for Structural Plain Concrete Use	0.66 ft
Required Reinforcing Type	T&S Only
Minimum Reinforcing Ratio Each Face	0.09%
Minimum Reinforcing, $A_{s\text{-}min}$	0.26 sq in/ft
Required Flexural Reinforcing, A_s	0.00 sq in/ft
Controlling Reinforcing, $A_{s\text{-}req'd}$	0.26 sq in/ft
#4 Bars @ 8 in O.C.	0.30 sq in/ft
#5 Bars @ 14 in O.C.	0.27 sq in/ft
#6 Bars @ 18 in O.C.	0.29 sq in/ft
#7 Bars @ 18 in O.C.	0.40 sq in/ft
#8 Bars @ 18 in O.C.	0.53 sq in/ft

Vertical Slab Footing Design Summary

Footing Width, b	8.00 ft
Footing Thickness, t	2.00 ft
Footing Depth, D	4.00 ft
Estimated Volume	2.4 yd3
Selected Bar Size	#5
Required Spacing	14 in o.c.

IBC Table 1806.2 - Allowable Foundation and Lateral Pressure

Class of Materials		Allowable Bearing Pressures	
		Vertical	Lateral
		psf	*psf/ft*
1	Crystalline bedrock	12000	1200
2	Sedimentary and foliated rock	4000	400
3	Sandy gravel and/or gravel (GW and GP)	3000	200
4	Sand, silty sand, clayey sand, silty gravel and clayey gravel (SW, SP, SM, SC, GM and GC)	2000	150
5	Clay, sandy clay, silty clay, clayey silt, silt and sandy silt (CL, ML, MH and CH)	1500	100
Geotech	Geotechnical study is applicable	--	--

Note: If structure is a sign or flagpole, the lateral bearing pressure value from above has been doubled at left per IBC 1806.3.4 (only for Class of Materials 1-5)

Note: If "Thickness, t" exceeds "Minimum Thickness for Structural Plain Concrete Use" value, ACI 318 does not require any reinforcement in footing since an unreinforced section is sufficient to resist the flexural loads applied to the footing. However, office standard practice is to provide at minimum 0.18% in a vertical slab footing with one-half distributed to each face, normal to the wind direction, of the footing.

RECTANGULAR BASE PLATE DESIGN

Input Parameters

Column Size	HSS4X4X1/4	
Column Type	HSS_Rect	
Axis	Strong	
Depth or Diameter, d	4.0 in	
Width, b_f	4.0 in	
Plate Length, N	15.0 in	**OK**
Plate Width, B	15.0 in	
Plate Thickness, t	0.75 in	**OK**
Edge Distance, N_{edge}	1.50 in	**OK**
Edge Distance, B_{edge}	1.50 in	**OK**
Bolt Configuration	Flange	
# per Flange Side	2	**OK**
Diameter, d_b	0.75 in	**OK**
Bolt Material	F1554 Grade 36	
Embedment Depth in Caisson / Vert. Slab	30 in	**OK**
Embedment Depth in Spread Footing		**N/A**
Grout Bed	No	
Fillet Weld Size at Column Base	0.19 in	**Use Gussets, Fw = 21.86**
Gussets (If yes, reduce req'd plate thickness by 20%)	Yes	
Second Fillet Weld at Inside of Column	No	
Weld Group Section Modulus With Gussets

STRUCTURAL CALCULATIONS FOR:

McDonald's

NEXT-GEN OHC

CALCULATIONS CONTAINED HEREIN ARE SUITABLE FOR THE THE FOLLOWING CODE REQUIREMENTS:

2021 IBC / ASCE 7-16 - UP TO AND INCLUDING 130 MPH

2018 IBC / ASCE 7-16 - UP TO AND INCLUDING 130 MPH

WIND DATA

Building Code	2021 / 2018 IBC	Importance Factor, I	1.0	Damping Ratio, β	0.005
Wind Load Criteria	ASCE 7-16	Directionality Factor, K_d [2]	0.85	Natural Frequency, n_1	4.65 Hz
Wind Speed, V	130 mph	Topography Factor, K_{zt}	1.0	Gust Effect Factor, G	0.85
Exposure Category	C	Base Pressure, $\gamma(q_z/K_z)$	22.1 psf	ASD Wind Load Factor, γ [3]	0.6
Wind Pressure Override per Jurisdiction Requirement	0 psf				

DEFLECTION ANALYSIS

Deflection Limit		H/60
Deflection at 0.7*W		0.20 in
Deflection Ratio	✓	H/695

Notes: (1) Loading values in chart below are based upon average K_z values for each segment. Actual values are calculated on hidden sheet using derived V-M equations. Chart is provided for information purposes only.
(2) Wind directionality (K_d) factor is 0.95 for Single Pole (Round) segments instead of 0.85. The C_f value from Fig. 6-21 has been increased by 0.95/0.85 to account for this variation.
(3) Wind pressures listed below have already been multiplied by the ASD Wind Load Factor, γ.

FOUNDATION DESIGN

Footing Loads

Axial, P_a	1.4 k
Moment, M_a	6.9 k-ft
Shear, V_a	0.4 k
Base Column to Footing Connection Type	Base Plate

Footing and Soils Data

Concrete Strength, f'$_c$	2500 psi
Materials Class	5
Sign or Flagpole	Yes
Allowable Vertical Bearing Pressure	1500 psf
Allowable Lateral Bearing Pressure	200 psf/ft

Caisson Footing

Constrained Base	No
Diameter, b	3.00 ft
Vertical Reinforcing Bar Size	#6
Top Depth to Ignore for Poor Soil Conditions	3.00 ft
Depth Calculation Status	OK
Effective Height, h	19.8
S1	0.32
S3	0.95
A	0.86 ft
Assumed Depth (not including ignored top depth)	4.76 ft
Required Depth (not including ignored top depth)	✓ 4.76 ft
Concrete Strength, f'$_c$	2500 psi
Minimum Diameter for Structural Plain Concrete Use	1.79 ft
Required Reinforcing Type	T&S Only
Minimum Reinforcing Ratio	0.50%
Minimum Reinforcing, $A_{s\text{-}min}$	5.09 sq in
Required Flexural Reinforcing Ratio	0.00%
Required Flexural Reinforcing, A_s	0.00 sq in
Controlling Reinforcing, $A_{s\text{-}req'd}$	5.09 sq in
(26) #4 Bars	5.20 sq in
(18) #5 Bars	5.58 sq in

(10) #7 Bars	6.00 sq in
(8) #8 Bars	6.32 sq in

Caisson Footing Design Summary

Footing Diameter, b	3.00 ft	
Footing Depth, D	8.00 ft	
Estimated Volume	2.1 yd3	**Stirrup Size & Spacing**
Selected Bar Size	#6	#4
Required Quantity	12	9.0 in

IBC Table 1806.2 - Allowable Foundation and Lateral Pressure

Class of Materials		Allowable Bearing Pressures	
		Vertical	Lateral
		psf	*psf/ft*
1	Crystalline bedrock	12000	1200
2	Sedimentary and foliated rock	4000	400
3	Sandy gravel and/or gravel (GW and GP)	3000	200
4	Sand, silty sand, clayey sand, silty gravel and clayey gravel (SW, SP, SM, SC, GM and GC)	2000	150
5	Clay, sandy clay, silty clay, clayey silt, silt and sandy silt (CL, ML, MH and CH)	1500	100
Geotech	Geotechnical study is applicable	--	--

Note: If structure is a sign or flagpole, the lateral bearing pressure value from above has been doubled at left per IBC 1806.3.4 (only for Class of Materials 1-5)

Note: If pole is directly embedded into caisson footing, the steel pole is deemed to provide footing reinforcement for flexural loads applied to the footing. If anchor bolts are used and the "Diameter, b" exceeds "Minimum Diameter for Structural Plain Concrete Use" value, ACI 318 does not require reinforcement in footing since an unreinforced section is sufficient to resist the flexural loads applied to the footing. However, office standard practice is to provide at minimum 0.18% in a caisson footing due to the presence of anchor bolts, primarily due to the need to develop the anchor bolt tensile forces with the longitudinal reinforcing.

DEFLECTION ANALYSIS

Deflection Limit		H/60
Deflection at 0.7*W		0.30 in
Deflection Ratio	✓	H/439

Notes: *(1) Loading values in chart below are based upon average K_z values for each segment. Actual values are calculated on hidden sheet using derived V-M equations. Chart is provided for information purposes only.*
(2) Wind directionality (K_d) factor is 0.95 for Single Pole (Round) segments instead of 0.85. The C_f value from Fig. 6-21 has been increased by 0.95/0.85 to account for this variation.
(3) Wind pressures listed below have already been multiplied by the ASD Wind Load Factor, γ.

Shear, V_a	0.6 k
Base Column to Footing Connection Type	Base Plate

Footing and Soils Data

Concrete Strength, f'$_c$	2500 psi
Materials Class	5
Sign or Flagpole	Yes
Allowable Vertical Bearing Pressure	1500 psf
Allowable Lateral Bearing Pressure	200 psf/ft

IBC Table 1806.2 - Allowable Foundation and Lateral Pressure

Class of Materials		Allowable Bearing Pressures	
		Vertical	Lateral
		psf	*psf/ft*
1	Crystalline bedrock	12000	1200
2	Sedimentary and foliated rock	4000	400
3	Sandy gravel and/or gravel (GW and GP)	3000	200
4	Sand, silty sand, clayey sand, silty gravel and clayey gravel (SW, SP, SM, SC, GM and GC)	2000	150
5	Clay, sandy clay, silty clay, clayey silt, silt and sandy silt (CL, ML, MH and CH)	1500	100
Geotech	Geotechnical study is applicable	--	--

Note: If structure is a sign or flagpole, the lateral bearing pressure value from above has been doubled at left per IBC 1806.3.4 (only for Class of Materials 1-5)

Caisson Footing

Constrained Base	No
Diameter, b	3.00 ft
Vertical Reinforcing Bar Size	#6
Top Depth to Ignore for Poor Soil Conditions	1.00 ft
Depth Calculation Status	OK
Effective Height, h	7.8
S1	0.30
S3	0.89
A	1.53 ft
Assumed Depth (not including ignored top depth)	4.44 ft
Required Depth (not including ignored top depth)	✓ 4.44 ft
Concrete Strength, f'$_c$	2500 psi
Minimum Diameter for Structural Plain Concrete Use	1.55 ft
Required Reinforcing Type	T&S Only
Minimum Reinforcing Ratio	0.50%
Minimum Reinforcing, $A_{s\text{-}min}$	5.09 sq in
Required Flexural Reinforcing Ratio	0.00%
Required Flexural Reinforcing, A_s	0.00 sq in
Controlling Reinforcing, $A_{s\text{-}req'd}$	5.09 sq in
(26) #4 Bars	5.20 sq in
(18) #5 Bars	5.58 sq in
(12) #6 Bars	5.28 sq in
(10) #7 Bars	6.00 sq in
(8) #8 Bars	6.32 sq in

Note: If pole is directly embedded into caisson footing, the steel pole is deemed to provide footing reinforcement for flexural loads applied to the footing. If anchor bolts are used and the "Diameter, b" exceeds "Minimum Diameter for Structural Plain Concrete Use" value, ACI 318 does not require reinforcement in footing since an unreinforced section is sufficient to resist the flexural loads applied to the footing. However, office standard practice is to provide at minimum 0.18% in a caisson footing due to the presence of anchor bolts, primarily due to the need to develop the anchor bolt tensile forces with the longitudinal reinforcing.

Footing Loads

Axial, P_a	0.2 k
Moment, M_a	1.2 k-ft
Shear, V_a	0.3 k
Base Column to Footing Connection Type	Base Plate

Footing and Soils Data

Concrete Strength, f'$_c$	2500 psi
Materials Class	5
Sign or Flagpole	Yes
Allowable Vertical Bearing Pressure	1500 psf
Allowable Lateral Bearing Pressure	200 psf/ft

IBC Table 1806.2 - Allowable Foundation and Lateral Pressure

Class of Materials		Allowable Bearing Pressures	
		Vertical	Lateral
		psf	*psf/ft*
1	Crystalline bedrock	12000	1200
2	Sedimentary and foliated rock	4000	400
3	Sandy gravel and/or gravel (GW and GP)	3000	200
4	Sand, silty sand, clayey sand, silty gravel and clayey gravel (SW, SP, SM, SC, GM and GC)	2000	150
5	Clay, sandy clay, silty clay, clayey silt, silt and sandy silt (CL, ML, MH and CH)	1500	100
Geotech	Geotechnical study is applicable	--	--

Note: If structure is a sign or flagpole, the lateral bearing pressure value from above has been doubled at left per IBC 1806.3.4 (only for Class of Materials 1-5)

Caisson Footing

Constrained Base	No
Diameter, b	2.00 ft
Vertical Reinforcing Bar Size	#6
Top Depth to Ignore for Poor Soil Conditions	0.75 ft
Depth Calculation Status	OK
Effective Height, h	3.8
S1	0.23
S3	0.70
A	1.60 ft
Assumed Depth (not including ignored top depth)	3.48 ft
Required Depth (not including ignored top depth)	✓ 3.48 ft
Concrete Strength, f'$_c$	2500 psi
Minimum Diameter for Structural Plain Concrete Use	0.99 ft
Required Reinforcing Type	T&S Only
Minimum Reinforcing Ratio	0.50%
Minimum Reinforcing, $A_{s\text{-}min}$	2.26 sq in
Required Flexural Reinforcing Ratio	0.00%
Required Flexural Reinforcing, A_s	0.00 sq in
Controlling Reinforcing, $A_{s\text{-}req'd}$	2.26 sq in
(12) #4 Bars	2.40 sq in
(8) #5 Bars	2.48 sq in
(6) #6 Bars	2.64 sq in
(4) #7 Bars	2.40 sq in
(4) #8 Bars	3.16 sq in

Note: If pole is directly embedded into caisson footing, the steel pole is deemed to provide footing reinforcement for flexural loads applied to the footing. If anchor bolts are used and the "Diameter, b" exceeds "Minimum Diameter for Structural Plain Concrete Use" value, ACI 318 does not require reinforcement in footing since an unreinforced section is sufficient to resist the flexural loads applied to the footing. However, office standard practice is to provide at minimum 0.18% in a caisson footing due to the presence of anchor bolts, primarily due to the need to develop the anchor bolt tensile forces with the longitudinal reinforcing.

WIND DATA

Building Code	2021 WASBC	Importance Factor, I	1.0	Damping Ratio, β	0.005
Wind Load Criteria	ASCE 7-16	Directionality Factor, K_d (2)	0.85	Natural Frequency, n_1	2.16 Hz
Wind Speed, V	110 mph	Topography Factor, K_{zt}	1.0	Gust Effect Factor, G	0.85
Exposure Category	C	Base Pressure, $\gamma(q_z/K_z)$	15.8 psf	ASD Wind Load Factor, γ (3)	0.6
Wind Pressure Override per Jurisdiction Requirement	0 psf				

DEFLECTION ANALYSIS

Deflection Limit		H/60
Deflection at 0.7*W		0.98 in
Deflection Ratio	✓	H/122

Notes: (1) Loading values in chart below are based upon average K_z values for each segment. Actual values are calculated on hidden sheet using derived V-M equations. Chart is provided for information purposes only.

(2) Wind directionality (K_d) factor is 0.95 for Single Pole (Round) segments instead of 0.85. The C_f value from Fig. 6-21 has been increased by 0.95/0.85 to account for this variation.

(3) Wind pressures listed below have already been multiplied by the ASD Wind Load Factor, γ.

#8 Bars @ 18 in O.C.	0.53 sq in/ft

Vertical Slab Footing Design Summary

Footing Width, b	7.50 ft
Footing Thickness, t	3.00 ft
Footing Depth, D	3.75 ft
Estimated Volume	3.1 yd3
Selected Bar Size	#6
Required Spacing	12 in o.c.

IBC Table 1806.2 - Allowable Foundation and Lateral Pressure

Class of Materials		Allowable Bearing Pressures	
		Vertical	Lateral
		psf	*psf/ft*
1	Crystalline bedrock	12000	1200
2	Sedimentary and foliated rock	4000	400
3	Sandy gravel and/or gravel (GW and GP)	3000	200
4	Sand, silty sand, clayey sand, silty gravel and clayey gravel (SW, SP, SM, SC, GM and GC)	2000	150
5	Clay, sandy clay, silty clay, clayey silt, silt and sandy silt (CL, ML, MH and CH)	1500	100
Geotech	Geotechnical study is applicable	--	--

Note: If structure is a sign or flagpole, the lateral bearing pressure value from above has been doubled at left per IBC 1806.3.4 (only for Class of Materials 1-5)

Note: If "Thickness, t" exceeds "Minimum Thickness for Structural Plain Concrete Use" value, ACI 318 does not require any reinforcement in footing since an unreinforced section is sufficient to resist the flexural loads applied to the footing. However, office standard practice is to provide at minimum 0.18% in a vertical slab footing with one-half distributed to each face, normal to the wind direction, of the footing.

RECTANGULAR BASE PLATE DESIGN

Input Parameters

Column Size	HSS4X4X1/4	
Column Type	HSS_Rect
