4-Input 4-Output Interface Module Model FDCI0422

Data Sheet

ARCHITECT AND ENGINEER SPECIFICATIONS

- Four (4) inputs/ four (4) outputs via one (1) address
- Light-emitting diode (LED) screen on all input/output functions
- Input lines can be supervised for open, short and ground-fault conditions
- Supports "Class A" and "Class B" input-circuit wiring
- Polarity insensitive utilizing SureWire™ technology
- Microprocessor-controlled signal evaluation
- Two-wire installation, per addressable loop
- Power supply via C-NET module
- Communication via C-NET
 - Individual addressing
- Four (4) AC-rated / DC-rated outputs
- Mounts in one (1) electrical back box
 - Optional 12 cm and 12.7 cm square back box
 - Restriction of Hazardous Substances (RoHS) compliant
- Electronic address programming is easy and dependable
- Easy front-end access to programming port and wiring terminals
- Model FDCI0422 (CPU) programs and verifies device's address, as well as performs test functionality
- ULC Listed;
 - FAC, CSFM #7165-0067/0264 and NYC Department Approved

Model FDCI0422
(white front plate included)

Product Overview
The four (4) input (4) output interface module (Model FDCI0422) from Siemens – Fire Safety is designed to provide the means of interfacing direct starting devices to the Device Loop Card (Model DLC), FireTracer™ XLS, as well as the Cerberus PRO fire alarm control panels (FACP). Model FDCI0422, which contains microcomputer chip (SureWire) technology and is polarity insensitive, achieves the state of an intelligent device through its highly advanced method of address programming and supervision – combined with its sophisticated, bi-directional FACP communication.

The relay and contact device inputs for Model FDCI0422 are controlled at the same address. From the FACP, the relay and input contacts can be controlled as a separate function. The relay is typically used where control or shunting of external equipment is required. Four (4) independent input circuits are permissible on one (1) Model FDCI0422 module.

Model FDCI0422 is designed to monitor Normally Open (NO) or Normally Closed (NC) dry contacts. Each interface module reports the status of the NO (or NC) to the FACP.

Answers for Infrastructure

SIEMENS

Specifications – (continued)

Separators are delivered in the following sizes:
 • 12 cm (4 3/4 in.) back box
 • 12 cm (4 3/4 in.) extension ring
 Note: Optional 12 cm back boxes are available exclusively via Rand Industries, Inc.

Model FDCI0422 has a multi-color LED that flashes (on) when operating in normal (standby) conditions. If unit is in a trouble event, and (1) to indicate a change of event status.

Model FDCI0422, which is fitted with screw terminals for connection to an addressable circuit, is fully compatible on the same circuit as Siemens Model V series detectors. Model HMS series addressable manual stations, or any other addressable intelligent module, such as Model HDM or Model HCP.

Field-Device Programmer / Test Unit

Model FDCI0422 is compatible with the Siemens field device programmer / test unit (Model DRU 8720), which is a compact, portable and menu-driven accessory for electronically programming and testing Model FDCI0422 easily and reliably.

Model DRU 8720 eliminates the need for cumbersome, unreliable mechanical programming methods – such as dial or rotary switches – and reduces installation and service costs by electronically programming and testing the detector prior to installation via the interface's microprocessor chip, non-volatile memory.

For proper operation of Model DRU 8720, the technician selects the accessory's program mode, and enters the device address. In turn, Model DRU 8720 automatically sets and verifies the address, as well as tests Model FDCI0422. When in the test mode, Model DRU 8720 will perform a series of diagnostic tests without altering the address or other stored data, allowing technicians to determine if the detector is operating properly.

Model DRU 8720 operates on AC power or rechargeable batteries, providing flexibility and convenience in programming and testing equipment from practically any location.

The FACP's CNET module provides supervised, power limited NO (NO) or Normally Closed (NC) dry contacts. Each interface module reports the status of the NO (or NC) to the FACP.

Electrical Ratings

Voltage Rating:	12VDC – 32VDC
Maximum Voltage:	32VDC
Operating current:	1mA
Peak Current:	1.92mA, max.
Supervised switch ratings	
Monitoring Voltage:	32VDC
Cable length (max.):	61 meters (200 feet), max.
Input shielding cable length range:	1.44m – 6.1m (50 ft – 200 ft)
C line to load:	0.02 μF, max.
C line to shield:	0.04 μF, max.
Line Sizes:	14 AWG, max. American Wire Gauge (AWG)
	18 AWG, min.

Technical Data

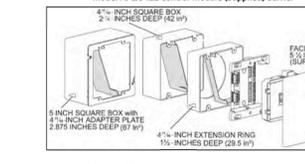

Communication Protocol:	C-net (supervised signaling fire circuit, zone module)
Storage Temperature Range:	–20° to +50°C (–4° to +120°F)
Operating Temperature Range:	–10° to +40°C (14° to +104°F)
Relative Humidity:	5% to 95% (non-freezing and condensing at low temperature)
Color:	Carbon, RA, 9017
Material:	Polycarbonate
Flame Rating:	UL 94V-0
Cage Code:	RA, 9017
Dimensions:	12 cm, 4 3/4 in. (W) x 12 cm, 4 3/4 in. (H) x 1.27 cm, 1/2 in. (D)
Weight:	454 g, (1 lb.)
Volume:	29.7 cm ³

Note: A – AC rated ratings are only applicable to Model FDCI0422 interface modules that have Engineering Item # (part number 04-9322-4-A) for Model FDCI0422. ES version is placed just to the right of the part number on the FACP.

NOTICE

AC ratings must not be used with modules with ES less than 10. The ES number can be found on the label.

Photoelectric Smoke Detector Model OP921

Data Sheet

ARCHITECT AND ENGINEER SPECIFICATIONS

- Compatible with Siemens Model FACP fire alarm control panels (FACP) or FireTracer™ XLS (FACP)
- Compatible with Model 8720 (CPU) (Device programmer / loop tester)
- Utilizes advanced microprocessor-based signal processing and sophisticated software algorithms to analyze the light, and provides highly stable and accurate smoke detection.
- Each detector is self-testing:
 - Self monitored for sensitivity within UL Listed limits
 - Complete diagnostics performed every 10 seconds
- Polarity insensitive utilizing SureWire™ technology
- Compatible with Model DRU 8720 series mounting bases
- Tri-color detector status LED with 360° viewing
- Field-selectable application sensitivity profiles
- Remote sensitivity measurement capability
- Utilizes advanced light processing
- Superior EMI / RFI immunity
- RoHS compliant

Model OP921

Product Overview
The Photoelectric Smoke Detector (Model OP921) uses state-of-the-art microcontroller circuitry and sophisticated technology for maximum reliability. Model OP921 incorporates an optical sensor using a light-scattering detector. The detector's microprocessor-based signal processing and sophisticated software algorithms to analyze the light, and provides highly stable and accurate smoke detection.

Further, Model OP921 uses state-of-the-art microprocessor chip with error check, detector self-diagnostics, and supervision program.

Field-Device Programmer / Test Unit
Model OP921 is compatible with the Siemens field device programmer / test unit (Model DRU 8720), which is a compact, portable, menu-driven accessory for electronically programming and testing detectors easily and reliably.

Product Overview – (continued)

Model 8720 (CPU) operates on AC power or rechargeable batteries, providing flexibility and convenience in programming and testing equipment from practically any location.

Model OP921 is a plug-in, two-wire and addressable photoelectric smoke detector. Model OP921 is UL Listed (UL94V-0) and is also listed by Underwriters' Laboratories (UL) as Model UL94V-0 for direct in-air duct wiring.

Each detector consists of a dust-resistant photoelectric sensor and microprocessor-based electronics with a low-profile housing. Every Model OP921 fire detector is shipped with a protective dust cover.

1. Dust cover
2. Smoke detector

Operation

Model OP921 is a wide-spectrum, photoelectric smoke detector incorporating an infrared light-emitting diode (IRED), and infrared light-sensing photodiode. Under normal conditions, the detector is supervised by the IRED. The smoke chamber is designed to manage light dispersion and refractive reflections from dust particles or other non-smoke, airborne contaminants in such a way as to maintain stable, consistent detector operation. When smoke enters the detector chamber, light emitted from the IRED is scattered by the smoke particles, and is received by the photodiode.

1. Lightpath
2. Optical sensor
3. Optical receiver

Sensitivity Settings

Application Parameter Sets
Model OP921 provides four (4) pre-programmed sensitivity parameter sets that can be selected by the FACP to match the expected application or environmental conditions:
 • Standard
 • Instant
 • Instant
 • Instant

This application parameter set is particularly suitable for areas where low misalarming sources of false alarms are present, and is appropriate where priority given to detecting open fires as soon as possible (e.g., typically a clean application with controlled environmental conditions).

Standard: This application parameter set is practically used for normal office, hotel, lobby-type applications, and is the default setting.

Instant: This application parameter set offers improved resistance to false alarms in areas where misalarming sources, such as cigarette smoke or exhaust fumes, may cause a nuisance alarm.

Air-Duct: This application parameter set is used when the detector is used in a UL94V-0 compliant direct in-air duct application without a duct housing.

Installation

All Model OP921 detectors use a surface-mounting base, Model DRU 8720 or Model DRU 8720E, which mounts on a 4-inch octagonal, square or single-gang electrical box. The base utilizes screw-clamp contacts for electrical connections and self-wiring contacts for increased reliability.

The Model DRU 8720 can be used with the optional M-411000-1 detector housing kit, which contains 50 detector boxes and an insulator to protect unaltered removal of the detector head. Model DRU 8720 has decorative panels to cover the outer mounting cover base.

Model OP921 may be installed on the same mounting circuit with the Siemens Model V series detectors (when used with the Cerberus PRO/FACP):

- Model HFP-11
- Model HFP series manual stations
- Model HFM series interfaces
- Model HCP series control devices
- Model HDS series of addressable, conventional zone modules

Application Data

Installation of Model OP921 detectors requires a two-wire circuit. In many retrofit cases, existing wiring may be used. Tapping is permitted only for Type B wiring. Model OP921 is polarity insensitive, which can greatly reduce installation and debugging time.

HMS-Series Models HMS-S, HMS-D

ARCHITECT AND ENGINEER SPECIFICATIONS

- Durable design
- Shock and vibration resistant
- Push-down lever is down, until manually reset
- Lock with key
- No break necessary
- Custom microprocessor chip technology
- Dynamic supervision to the fire alarm control panel (FACP)
- Polarity insensitive via SureWire™ technology
- Two-wire operation
- Surface or flush installation
- Model DRU programs and verifies address and tests functionality of each device
- Electronic address programming is easy, more efficient and more dependable
- Come in single action (Model HMS-S) and double action (Model HMS-D) versions
- ULC Listed;
 - FAC, CSFM & NYC Fire Dept. Approved

Model HMS-S
Single Action Station

Model HMS-D
Double Action Station

Product Overview

Models HMS-S and HMS-D intelligent manual fire alarm boxes provide the most advanced method of address programming and supervision. Each Model HMS-series manual fire alarm box achieves the state of an intelligent initiating device by incorporating custom microprocessor chip technology with sophisticated, bi-directional communication capabilities with the FACP.

Specifications
Models HMS-S and HMS-D are constructed of durable, molded polycarbonate material that is matte finished in red with raised white lettering. The housing accommodates a push-down lever, which, when operated – locks into position, indicating the manual fire alarm box has been activated. The push down lever remains down (in the "locked" position, until the fire alarm is manually reset. The manual fire alarm box can only be reset by opening the hinged housing cover with an Allen key followed by closing and locking the cover.

Specifications – (continued)

Models HMS-S and HMS-D are fitted with screw terminals for connection to an addressable circuit, and can be either surface or flush mounted. The Model HMS-series manual fire alarm boxes derive their power, communication information and receive commands over a single pair of wires. The Model HMS-series is compatible on the same circuit with all V-series detectors, interfaces or addressable, conventional zone modules.

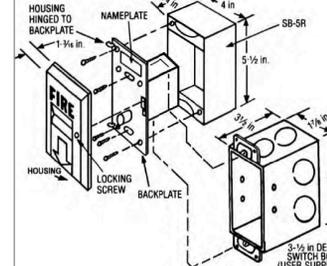

Details for Ordering

Model Number	Part Number	Description	Shipping Weight (lb.)	Weight (lb.)
