UPDATED**

On this day we have inspected your construction for **Engineering Daily Inspection** and we find the following result of the inspection. If there are any questions, please contact the inspector below.

Comments: Spartan removed the thrust block from behind the test cap of the water line. With the residual pressure from sampling the water main separated at the closest joint. This resulted in dirty water entering the water line. The water main shall be injected with chlorine, let cook, reflush, resample, and repressure test.

The straw waddles in the bus loop haven't been replaced yet.

The CB's in unpaved area's haven't had silt fence or straw bales placed around them yet.

The bus loop and parking lot need to be cleaned and dust kept down.

Corrections:

- 2 encircle all catch basins with silt fence that are not in paved areas
- 3 replace straw waddles along the bus loop
- 4 inject chlorine into the new water main.
resample water main.
repressure test water main.

Sincerely,
