8/4/2024

Upon the request of the school district an onsite inspection was performed on all significant trees remaining on site.

Five trees were identified as significant, all five trees are to remain and be protected during construction activities.

The significant trees will have no impact on the proposed rain garden and are to be protected with Tree Protection Zones (TPZ).

Trim up the 5 significant trees for line of sight and health and install a TPZ for each tree.

Remove one decayed Flowering Plum with a DBH of 12" near entrance from 26th St SE.

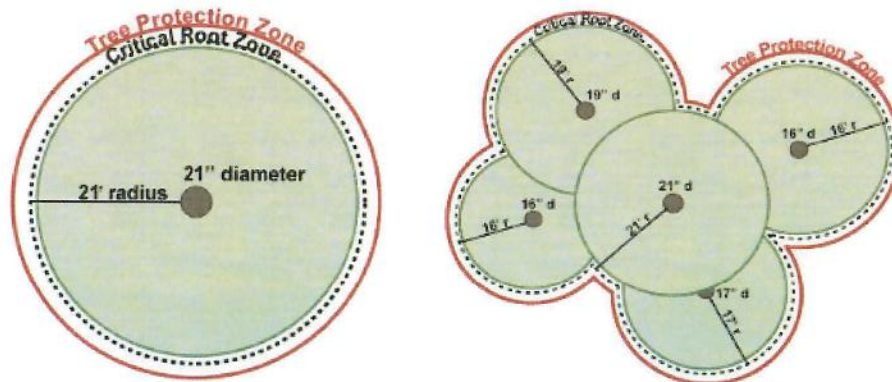

Steven J Wortinger PN-7076A TRAQ

**Tree protection barrier** encloses the Tree Protection Zone and is at least 4' tall, highly visible, sturdy, permanent and has warning signs on or near it for the duration of any construction activities.

**Tree Protection Zone (TPZ)** is an area where construction activities are prohibited or restricted to prevent injury to preserved trees, especially during pre- construction and construction, and includes the Critical Root Zone and/or beyond.

**Best Management Practices**

To promote the health of trees and stands of trees before, during, and after construction activities, follow these basic BMPs:

*Planning Phase*

1. Before assessing trees and other site structures and conditions, mark the site boundaries on plans and in the field to delineate which trees and stands of trees will be inventoried.
2. Perform a tree inventory that includes at minimum the location, size, and health of each tree and delineates quality stands of trees. Scope of the inventory should be based on communication and needs of the project team (developer, planner, engineer, architect
