**Document Title:** Stormwater Outfall Management & BMP Facilities Agreement  
**Grantee:** City of Puyallup  
**Grantor:** BPLC Properties, LLC  
**Abbreviated Legal Description:** Section 26 Township 20 Range 04 Quarter 42  
**Complete Legal Description on Page 4 of this Document**  
**Assessor’s Tax Parcel or Account Number(s):** 2105200193  
**Reference Number of Related Document(s):**

## Stormwater Management & BMP Facilities Agreement

- A. Parties.** The parties to this agreement are Grantee City of Puyallup, a Washington State municipal corporation (City), and Grantor landowner BPLC Properties, LLC, a Washington Limited Liability Company (Landowner).
- B. Property.** Landowner is the owner of certain real property (Property), which is legally described in this document and is located at the following address: 2511 Inter Avenue, Puyallup, WA 98372.
- C. Development Plan & Stormwater Facilities.** The site, subdivision or other development plan (Plan) for the Property, specifically known, entitled or described as BPLC North provides for detention, retention, treatment or management of stormwater that is associated with the Property through the use of identified stormwater facilities or best management practices (collectively, Stormwater Facilities). Upon approval of the Plan by the City, the Plan shall be incorporated herein by this reference. In accordance with the Plan, Landowner shall adequately construct, operate, use, maintain and repair the Stormwater Facilities.

RANGE	TOWNSHIP	SECTION	QUARTER		
04E-	20 N-	26	04	066	2/33
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

**D. Agreement.** On the terms and conditions set forth herein, the City and Landowner agree as follows:

1. The Stormwater Facilities shall be constructed, operated, used, maintained and repaired by Landowner in accordance with the requirements of the Plan, and any other applicable law or regulation.
2. Landowner (which expressly includes its agents, successors and assigns, including any homeowners association) shall adequately and properly operate, use, maintain and repair the Stormwater Facilities as described in the maintenance and operations manual, which is on file with the City, and may be attached and recorded herewith as Exhibit A. This duty extends to all associated pipes and channels, as well as all structures, improvements, and vegetation that are provided to control the quantity and quality of the stormwater. Adequate maintenance shall mean maintenance that is sufficient to keep the Stormwater Facilities in good working order and operating so as to satisfy the design and performance standards of the Plan.
3. Landowner shall regularly inspect the Stormwater Facilities and shall submit an inspection report to the City at least once a year on a date prescribed by the City. The purpose of the inspection(s) is to ensure that the Stormwater Facilities are safe and functioning properly. The scope of the inspection shall include the entire Stormwater Facilities, including but not limited to, berms, outlet structures, pond areas, access roads, and so forth. Deficiencies and any performance or other related issues shall be noted by Landowner in the inspection report. The annual report shall be in a form and include content as prescribed from time to time by the City. An example copy of the report form may be attached hereto as Exhibit B.
4. Landowner hereby grants permission to the City to enter upon the Property to inspect the Stormwater Facilities. Except in case of emergency, the City shall provide Landowner with at least forty-eight (48) hours written notice prior to entering on to the Property. Landowner shall be entitled to have a representative accompany the City during such inspection. The City shall provide Landowner with copies of written inspection reports.
5. If Landowner fails to adequately and properly operate, use, maintain or repair the Stormwater Facilities, the City shall notify Landowner in writing and provide Landowner with a reasonable opportunity to cure. If Landowner fails to timely cure, then the City may enter upon the Property and remedy the issue(s) identified in the notice and those reasonably related thereto; Furthermore, if the City performs work of any nature, or expends any funds in performance of said work for labor, use of equipment, supplies, materials, and the like while remedying the identified issues, the City may charge the cost of the remedy to Landowner, and Landowner shall promptly pay the costs to the City. Notwithstanding the foregoing, the City shall be under no obligation to inspect, maintain or repair the Stormwater Facilities.
6. Landowner shall defend, indemnify and hold the City, its officers, officials, employees and volunteers harmless from any and all claims, injuries, damages, losses or suits including attorney fees, arising out of or in connection with activities or operations, performed by Landowner, or on Landowner's behalf, that relate to the Stormwater Facilities and the subject matter of this agreement, except for injuries and damages caused by the negligence of the City.

DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

**E. Covenant.** The terms and provisions of this agreement constitute a covenant, which is subject to the following: This covenant is an equitable covenant. It touches and concerns the land that is described as the Property herein. The parties intend that this covenant shall bind the parties' successor and assigns. This covenant shall run with the land that is described as the Property herein, and shall bind whoever has possession of the land, in whole or in part, without regard to whether the possessor has title, or has succeeded to the same estate that granting parties have or had. Possessors shall include, but are not limited to, leasehold tenants, contract purchasers, subtenants, and adverse possessors. This covenant shall run with the land even in the absence of the transfer of some interest in land, other than the covenant itself, between Landowner and the City. This covenant shall not be governed by the mutuality rule. The burden of the covenant can run independently from the benefit of the covenant, and the benefit need not run. The benefit may be in gross or personal to Landowner or the City. Landowner waives its right to assert any defenses to the enforcement of this covenant, including, but not limited to, the change of neighborhood doctrine, laches, estoppel, balancing of hardships, and abandonment. If Landowner breaches any term of this covenant and agreement, then all remedies in equity and at law, including, but not limited to, injunctions, mandamus, declaratory judgments, and damages, shall be available to the City.

**F. Governing Law & Venue.** This agreement shall be governed by and construed in accordance with the laws of the State of Washington. The venue for any action that arises from or out of this instrument shall be the Pierce County Superior Court.

**Section 1 – Project Description**

**Site Address:** 2511 Inter Ave Puyallup, WA 98372

**Developer Address:** PO Box 1988  
Buckley, WA 98321-1988

**Tax Parcel Numbers:** 2105200180, 2105200192 and 2105200192

**Ownership/Maintenance:** Property Owner – BPLC Properties, LLC

**Legal Description:**  
Block 10, Ackerson's Second Addition to Puyallup, according to the plat thereof recorded in Volume 8 of Plats, page 25, Records of Pierce County, Washington.

Situate in the County of Pierce, State of Washington.

Said parcel having 81,135 sq. ft. or 1.86 acres.

The BPLC North project proposes the remodel of an existing commercial industrial building and portable building on a 0.93-acre site comprised of two parcels (2105200180 and 2105200192) zoned Limited Manufacturing (ML). The property has frontage along Inter Ave which provides access with a new commercial driveway approach. Improvements are proposed along Inter Ave which include curb, gutter and sidewalk extended across the property’s frontage. The project site proposes approximately 35,480 sq.ft. of paving, that does not include overlaying the existing asphalt, across onsite and offsite improvements and 11,472 sq.ft. of landscaping; therefore, according to Figure 2.4.1 and 2.4.2 of Volume I of the Manual, the project must evaluate all minimum requirements for the new and replaced surfaces; see Section 5 of this report for a detailed discussion of the minimum requirements. The project proposes permeable pavement for flow control of the newly paved and landscaped surfaces. Runoff treatment is provided by the native soils underlying the permeable pavement since they meet the CEC and organic requirements. All disturbed areas which are not converted to impervious surface will apply soil amendments per BMP T5.13. The average annual cost for maintenance is approximated to be \$10,000.00.

RANGE	TOWNSHIP	SECTION	QUARTER	066	9/33
04E-	20 N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

**Section 2 – Maintenance Importance and Intent**

“The importance of maintenance for the proper functioning of stormwater control facilities cannot be over-emphasized. A substantial portion of failures (clogging of filters, resuspension of sediments, loss of storage capacity, etc.) are due to inadequate maintenance. Stormwater BMP maintenance is essential to ensure that BMPs function as intended throughout their full life cycle.

The fundamental goals of maintenance activities are to ensure the entire flow regime and treatment train designed for this site continue to fully function. For this site these include:

- Maintain the ability of storm facility to attenuate flows.
- Maintain ability to safely convey design stormwater flows.
- Preserve soil and plant health, as well as stormwater flow contact with plant and soil systems.
- Clearly identify systems so they can be protected
- Keep maintenance costs low
- Prevent large-scale or expensive stormwater system failures
- Prevent water quality violations or damage to downstream properties.

**Section 3 – Responsible Parties**

Stormwater drainage facilities will be installed, constructed, and maintained with documentation of maintenance by the homeowner. This maintenance plan shall be kept onsite and must be made available for inspection by the City of Puyallup upon request.

RANGE	TOWNSHIP	SECTION	QUARTER	066	10/ 33
04E-	20 N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

**Section 4 – Facilities Requiring Maintenance**

The following stormwater facilities/Best Management Practices require maintenance:

- Permeable Pavement
- Conveyance Pipes and Catch Basins.
- Amended Soils

**Section 5 – Maintenance Instructions**

“The parties responsible for maintenance must review and apply the maintenance requirements contained herein. These maintenance instructions outline conditions for determining if maintenance actions are required, as identified through inspection. However, they are not intended to be measures of the facility’s required condition at all times between inspections. Exceedance of these conditions at any time between inspections or maintenance activity does not automatically constitute a violation of these standards. However, based upon inspection observations, the inspection and maintenance presented in these checklists shall be adjusted to minimize the length of time that a facility is in a condition that requires a maintenance action. For facilities not owned and maintained by the City, a log of maintenance activity that indicates what actions were taken must be kept on site and be available for inspection by the City.”

The following pages contain maintenance needs for most of the components that are part of your drainage system, as well as for some components that you may not have. Let the City know if there are any components that are missing from these pages. Ignore the requirements that do not apply to your system. You should plan to complete a checklist for all system components on the following schedule:

RANGE	TOWNSHIP	SECTION	QUARTER	066	11/ 33
04E-	20 N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

1. Monthly from November through April.
2. Once in late summer (preferably in September).
3. After any major storm (use 1-inch in 24-hours as a guideline).

Using photocopies of the checklist pages check off the problems that you looked for each time you did an inspection. Add comments on problems found and actions taken. Keep these “checked” sheets in your files, as they will be used to write your annual report. Some items do not need to be looked at every time an inspection is done. Use the suggested frequency at the left of each item as a guideline for your inspection.

**Section 6 – Vegetation Maintenance**

Plant material affecting the storm water system consists of grass, leaves, and yard debris. Maintenance checklists on the following pages and instructions listed above address appropriate maintenance requirements.

**REQUIRED ACTIONS: The following actions shall be taken to ensure that pollution generated on site shall be minimized:**

1. Warning signs (e.g., "Dump No Waste-Drains to Stream") shall be painted or embossed on or adjacent to all storm drain inlets. They shall be repainted as needed.
2. Sediment removed from the catch basins and storm system shall be disposed of in a proper manner. Contact the City of Puyallup for instruction prior to completing this task.

## Catch Basin

Catch Basin			
Drainage System Feature	Potential Defect	Conditions When Maintenance Is Needed	Minimum Performance Standard
Note: table spans multiple pages.			
General	Trash and Debris	Trash or debris which is located immediately in front of the catch basin opening or is blocking inletting capacity of the basin by more than 10%.	No trash or debris located immediately in front of catch basin or on grate opening.
		Trash or debris (in the basin) that exceeds 60 percent of the sump depth as measured from the bottom of basin to invert of the lowest pipe into or out of the basin, but in no case less than a minimum of six inches clearance from the debris surface to the invert of the lowest pipe.	No trash or debris in the catch basin.
		Trash or debris in any inlet or outlet pipe blocking more than 1/3 of its height.	Inlet and outlet pipes free of trash or debris.
		Dead animals or vegetation that could generate odors that could cause complaints or dangerous gases (e.g., methane).	No dead animals or vegetation present within the catch basin.
	Sediment	Sediment (in the basin) that exceeds 60 percent of the sump depth as measured from the bottom of basin to invert of the lowest pipe into or out of the basin, but in no case less than a minimum of 6 inches clearance from the sediment surface to the invert of the lowest pipe.	No sediment in the catch basin.
	Structure Damage to Frame and/or Top Slab	Top slab has holes larger than 2 square inches or cracks wider than 1/4 inch.  (Intent is to make sure no material is running into basin.)	Top slab is free of holes and cracks.
		Frame not sitting flush on top slab, i.e., separation of more than 3/4 inch of the frame from the top slab. Frame not securely attached.	Frame is sitting flush on the riser rings or top slab and firmly attached.
Fractures or Cracks in	Maintenance person judges that structure is unsound.	Basin replaced or repaired to design standards.	

RANGE	TOWNSHIP	SECTION	QUARTER	066	13/ 33
04E-	20N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

	Basin Walls/ Bottom	Grout fillet has separated or cracked wider than 1/2 inch and longer than 1 foot at the joint of any inlet/outlet pipe or any evidence of soil particles entering catch basin through cracks.	Pipe is regouted and secure at basin wall.
	Settlement/ Misalignment	Catch basin has settled more than 1 inch or has rotated more than 2 inches out of alignment.	Basin replaced or repaired to design standards.
	Vegetation Inhibiting System	Vegetation growing across and blocking more than 10% of the basin opening.	No vegetation blocking opening to basin.
		Vegetation growing in inlet/outlet pipe joints that is more than six inches tall and less than six inches apart.	No vegetation or root growth present.
Contaminants and Pollution	Any evidence of oil, gasoline, contaminants, or other pollutants. Sheen, obvious oil, or other contaminants present.  • Identify and remove source	No contaminants or pollutants present.	
Catch Basin Cover	Cover Not in Place	Cover is missing or only partially in place. Any open catch basin requires maintenance.	Catch basin cover is closed.
	Locking Mechanism Not Working	Mechanism cannot be opened by one maintenance person with proper tools. Bolts into frame have less than 1/2 inch of thread. One or more bolts are missing.	Mechanism opens with proper tools. All bolts are seated and no bolts are missing. Cover is secure.
	Cover Difficult to Remove	One maintenance person cannot remove lid after applying normal lifting pressure (Intent is to keep cover from sealing off access to maintenance).	Cover can be removed by one maintenance person.
Metal Grates (If Applicable)	Grate Opening Unsafe	Grate with opening wider than 7/8 inch.	Grate opening meets design standards.
	Trash and Debris	Trash and debris that is blocking more than 20% of grate surface inletting capacity.	Grate free of trash and debris.
	Damaged or Missing	Grate missing or broken member(s) of the grate.	Grate is in place and meets design standards.
Oil/Debris Trap (If Applicable)	Dislodged	Oil or debris trap is misaligned with or dislodged from the outlet pipe.	Trap is connected to and aligned with outlet pipe.

DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

Permeable Pavement			
Drainage System Feature	Potential Defect	Conditions When Maintenance Is Needed	Minimum Performance Standard
Note: table spans multiple pages.			
Permeable Pavements (all)	Material Deposited on Pavement	Runoff from adjacent pervious areas deposits soil, mulch, or sediment on paving.	Soil, mulch, or sediment from adjacent areas has been removed from permeable pavement and measures taken to prevent further deposition of soil/ mulch material from adjacent areas on permeable pavement.
	Vegetative Debris	Accumulation of organic debris and leaf litter. Vegetation related fallout clogs or will potentially clog voids.	Vegetative debris removed and sources trimmed/ pruned as appropriate to reduce further debris accumulation. Water infiltrates per design function.
Porous Asphalt or Pervious Concrete	Surface Clogged	Surface is clogged: Ponding on surface or water flows off the permeable pavement surface during a rain event (does not infiltrate). Infiltration rate testing using ASTM C1701 indicates an infiltration rate of 10 inches per hour or less.	Surface has been cleaned/ cleared of sediment, debris, vegetation or other material and water infiltrates per design function.
	Sediment on Surface	Sediment present at the surface of the pavement.	Source of sediment has been identified and addressed, if possible. Surface of pavement is free of sediment.
	Moss Growth on Pavement	Moss growth inhibits infiltration or poses slip safety hazard.	Moss removed such that there is not a slip safety hazard and pavement infiltrates per design function.
	Pavement Damaged	Major cracks or trip hazards and concrete spalling and raveling.	Cracks or other damage to pavement repaired to grades and tolerances per design specifications; infiltration functions per design.
Interlocking Concrete Paver Blocks and Aggregate Pavers	Surface Clogged	Surface is clogged: Ponding on surface or water flows off the permeable pavement surface during a rain event (does not infiltrate). ). Infiltration rate testing using ASTM C1701 indicates an infiltration rate of 10 inches per hour or less.	Surface has been cleaned/ cleared of sediment, debris, vegetation or other material and water infiltrates per design function.
	Settlement	Settlement of pavement surface (may indicate other problems).	Pavement restored to finished grades per design specifications and record drawings. Surface drainage function restored.
	Sediment on Surface	Sediment present at the surface of the pavement.	Surface of pavement is free of sediment and infiltrates per design function.
	Moss Growth on Pavement	Moss growth inhibits infiltration or poses slip safety hazard.	Moss removed such that there is not a slip safety hazard and pavement infiltrates per design function.
	Pavers Missing/ Damaged	Paver block(s) are missing or damaged.	Paver blocks repaired or replaced per design specifications and record drawings.
	Loss of Aggregate	Loss of aggregate material between paver blocks.	Aggregate replaced per design specifications and paver manufacturer's recommendations.

RANGE	TOWNSHIP	SECTION	QUARTER	066	15/ 33
04E-	20 N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

Permeable Pavement			
Drainage System Feature	Potential Defect	Conditions When Maintenance Is Needed	Minimum Performance Standard
Note: table spans multiple pages.			
	Settlement	Surface has settled in a manner that poses a safety hazard or inhibits infiltration.	Pavers restored to finished grades per design specifications and record drawings.
Open-Celled Paving Grid With Gravel	Aggregate Clogged	Aggregate is clogged: Ponding on surface or water flows off the permeable pavement surface during a rain event (does not infiltrate).	Aggregate has been cleaned/ cleared of sediment, debris, vegetation or other material and water infiltrates per design function.
	Paving Grid Missing/ Damaged	Paving grid missing or damaged.	Paving grid replaced or restored per design specifications and record drawings.
	Settlement	Settlement of pavement surface (may indicate other problems).	Pavement restored to finished grades per design specifications and record drawings.
	Loss of Aggregate	Loss of aggregate in paving grid.	Aggregate replaced per design specifications.
Open-Celled Paving Grid With Grass	Aggregate Clogged	Aggregate is clogged: Ponding on surface or water flows off the permeable pavement surface during a rain event (does not infiltrate).	Surface has been rehabilitated per manufacturer's recommendations and water infiltrates per design function.
	Paving Grid Missing/ Damaged	Paving grid missing or damaged.	Paving grid and grass surface replaced or restored per design specifications and record drawings.
	Settlement	Settlement of pavement surface (may indicate other problems).	Pavement restored to finished grades per design specifications and record drawings.
	Poor Grass Coverage	Poor grass coverage in paving grid.	Grass coverage restored per design specifications and manufacturer's recommendations.
Inlets/ Outlets/ Pipes	Inlet/ Outlet Pipe Damaged	Pipe is damaged.	Damaged pipe has been repaired/ replaced and flow capacity functions per design.
	Inlet/ Outlet Pipe Clogged	Pipe is clogged.	Pipe has been cleared and flow capacity functions per design.
	Underdrain Pipe Clogged	Plant roots, sediment or debris reducing capacity of underdrain (may cause prolonged drawdown period).	Pipe has been cleared and infiltration rate/ flow capacity of system functions per design.
	Raised Subsurface Overflow Pipe Clogged	Plant roots, sediment or debris reducing capacity of underdrain.	Pipe has been cleared and infiltration rate/ overflow capacity of system functions per design specifications.
	Outlet Structure Clogged	Sediment, vegetation, or debris reducing capacity of outlet structure.	Blockage has been cleared and outlet structure functions at full capacity per design.
	Erosion at Overflow	Native soil is exposed or other signs of erosion damage are present at discharge point.	Erosion has been repaired and eroded area stabilized.
Observation Port	Water Visible in Storage Aggregate	Water remains in the storage aggregate longer than anticipated by design after the end of a storm.	Cause or ponding investigated and addressed as needed to bring facility into conformance with design function.

## Compost-Amended Soil

Compost-Amended Soil			
Drainage System Feature	Potential Defect	Conditions When Maintenance Is Needed	Minimum Performance Standard
Soil Media	Soils Waterlogged or Not Infiltrating	Soils become waterlogged, or otherwise do not appear to be infiltrating.	Soils have been aerated or amended such that infiltration occurs and soils to not remain completely saturated, per design specifications.
	Erosion/Scouring	Areas of potential erosion are visible, such as gullies or scouring.	Any eroded areas have been repaired, and sources of erosion addressed to prevent further soil erosion.
Vegetation	Vegetation in Poor Health	Less than 75% of planted vegetation is healthy with a generally good appearance.	At least 75% of planted vegetation is healthy with generally good appearance. Any conditions found that were deleterious to plant health have been corrected where possible.  Routine maintenance schedule has been updated as necessary to ensure continued plant health and satisfactory appearance.
	Poisonous Plants and Noxious Weeds	Any poisonous plants or nuisance vegetation which may constitute a hazard to maintenance personnel or the public.  Any evidence of noxious weeds as defined by State or local regulations.	No danger of poisonous vegetation where maintenance personnel or the public might normally be.  Eradication of Class A weeds as required by State law. Control of other listed weeds as directed by local policies.  Apply requirements of adopted IPM policy for the use of herbicides.
	Other Weeds Present	Other weeds (not listed on City/State noxious weed lists) are present on site.	Weeds have been removed per the routine maintenance schedule, following IPM protocols.

## Pollution Source Control Program for Commercial/Industrial Activities

Pollution source controls are actions taken by a person or business to reduce the amount of pollution reaching the surface and ground waters. Controls, also called “best management practices” or (BMPs), include:

- ❖ Altering the activity (e.g., substitute non-toxic products, recycle used oil, reroute floor drains to sanitary sewer from storm sewer)
- ❖ Enclosing or covering the activity (e.g., building a roof)
- ❖ Segregating the activity (e.g., diverting runoff away from an area that is contaminated)
- ❖ Routing runoff from the activity to a treatment alternative (e.g., to a wastewater treatment facility, sanitary sewer, or stormwater treatment area)

Pollution source controls are needed because of the contamination found in runoff from commercial areas and the effect of this contamination on aquatic life and human health.

### BMPs to Consider for all Activities

Before we get to the list of activity specific BMPs, here is a summary of items that each business should consider. Most of these are common sense, housekeeping types of solutions, but if each business would take some action on each of these, the improvement in water quality would be substantial.

1. **Avoid the activity or reduce its occurrence.** If you can, avoid the activity or do it less frequently. Is there a suitable process or a different material you can use to get the job done? Can you do a larger run of a process at one time? For instance, raw materials could be delivered close to the time of use instead of being stockpiled and exposed to the weather. Perhaps you could avoid one solvent-washing step altogether. The department of Ecology or the Tacoma-Pierce County Health Department can provide pollution prevention assistance.
2. **Move the activity indoors.** Sometimes it is fairly easy to move an activity out of the weather. The benefits of this are twofold; you prevent runoff contamination, and you provide for easier, more controlled cleanup if a spill occurs. An example would be unloading and

RANGE	TOWNSHIP	SECTION	QUARTER	066	19/
04E-	20 N-	26	04		33
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

storing barrels of chemicals inside a garage area instead of doing it outside. Please be aware that moving storage areas indoors may require installation of fire suppression equipment or other building modifications as required by the Uniform Building Code, the Uniform Fire Code, local ordinances.

3. **Use less material.** Don't buy or use more material than you really need. This not only helps keep potential disposal, storage and pollution problems to a minimum, but will probably save you money, too.
4. **Use the least toxic materials available.** Investigate the use of materials that are less toxic than what you use now. Perhaps a caustic-type detergent or a solvent could be replaced with a more environmentally friendly product. Such a change might allow you to discharge process water to the sanitary sewer instead of paying for expensive disposal (contact Pierce County Utilities at 565-3013 to find out about allowable sanitary discharges and pretreatment permits). Remember that even if you do switch to a biodegradable product, nothing but uncontaminated water is allowed to enter the storm drain system.
5. **Create and maintain vegetated areas near activity locations.** Vegetation of various kinds can help filter pollutants out of stormwater, so it is advisable to route stormwater through vegetated areas located near your activity. For instance, many parking lots contain grassy islands, typically formed in a "hump". By creating those islands as depressions instead of humps, they can be used to treat runoff from the parking lot or roof. Also, don't forget the erosion control benefits of vegetation at your site.
6. **Locate activities as far as possible from surface drainage paths.** Activities located as far as possible from known drainage paths, ditches, streams, and drains will be less likely to pollute, since it will take longer for material to reach the drainage feature. This gives you more time to react in the event of a spill, or if it is a "housekeeping" issue, may protect the local waters long enough for you to clean up the area around the activity. Don't forget that groundwater issues are always prominent, no matter where the activity is located, so the actions taken on your site on a day-to-day basis are always important, even in dry weather.
7. **Keep storm drain systems clean.** Pollutants can concentrate over time in storm drainage structures such as catch basins, ditches and storm drains. When a large storm event occurs, it can mobilize these pollutants and carry them to receiving waters. Develop and implement

RANGE	TOWNSHIP	SECTION	QUARTER		20/
04E-	20 N-	26	04	066	33
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

maintenance practices, inspections, and schedules for treatment devices (e.g., detention ponds, oil/water separators, vegetated swales, etc.).

8. **Reduce, reuse and recycle as much as possible.** Always look for ways to recycle instead of just disposing. This can save money as well as keep both hazardous and non-hazardous materials out of the landfills. You can learn more about other businesses that have made process changes allowing recycling of chemicals by calling the DOE at 1-800-RECYCLE and requesting publication #92-45 and 90-22. Another unique recycling opportunity for businesses is available through the Industrial Materials Exchange (IMEX). This free service acts as a waste or surplus "matchmaker", helping one company's waste become another company's asset. For instance, waste peach pits from a cannery become potpourri ingredients to another business. Call IMEX at 206625-6232 to list your potentially usable solid or chemical waste in their publication.
  
9. **Be an advocate for stormwater pollution prevention.** Help friends, partners and business associates find ways to reduce stormwater pollution in their activities. Most people want clean water, and do not pollute intentionally. Share your ideas and the BMPs in this manual to get them thinking about how their everyday activities affect water quality.
  
10. **Report violators.** Allowing anyone to pollute our water resources is wrong. We all must do our part to protect water, fish, wildlife and our own health, by employing proper BMPs, and reporting those who are causing pollution. In Pierce County, call Pretreatment Inspections at 565-3013 to report dumping to sewers, and Surface Water Management at 798-2725 to report incidents involving storm drains or ditches.

**Site specific BMPs are to include, but are not limited to:**

1. Pressure Washing of Building Facades, Rooftops, Pavement, Boats and other Large Objects

This activity applies to businesses and public agencies engaged in pressure washing of large objects such as building facades, fences and masonry, rooftops and boats on a site- to-site basis. Pressure washing can contribute directly to water quality degradation since the runoff from such operations typically travels straight into the storm drainage system. Pressure washing of boats in boatyards, marinas and drydock areas requires a National Pollutant Discharge Elimination System (NPDES) permit. Contact the Department of Ecology to apply for this permit. Businesses

RANGE	TOWNSHIP	SECTION	QUARTER	066	21/ 33
04E-	20 N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

already covered by an NPDES permit are not required to enact the BMPs listed below, since they will be meeting other requirements as specified by Ecology.

**Pollutants of Concern:** Suspended solids, heavy metals, Biochemical oxygen demand (BOD), Chemical oxygen demand (COD), nutrients.

**Required BMPS**

The following BMPs or equivalent measures are required of all businesses and public agencies engaged in pressure washing of large objects:

- ❖ Employees must be educated in measures to control pollution from pressure washing operations.
- ❖ All runoff must be collected and disposed of properly or filtered to remove pollutants. No runoff should leave the site, either overland or by entering the storm drainage system. Temporary curbs, dikes or berms can be used to direct the water to one or more collection areas, where it can then be sucked up and removed off site to be disposed of in the sanitary sewer (provided it is not considered a hazardous waste). Catch basin covers can help facilitate collection. An alternative would be to use catch basin filters to remove pollutants from the wash water before it enters the storm drainage system.
- ❖ If the pressure washing wastewater does not collect in a centralized area, such as when the area is very flat, or you are on a grassed area, a tarp or sheet must be placed under the washing area to collect paint chips and other debris that is loosened by the spray.
- ❖ Pressure washing of boats (not at boatyards, marinas or drydocks) must be done on land where runoff control can be achieved.

**Suggested BMPs**

The following BMPs are not required, but can provide additional pollution protection:

- ❖ If detergents or cleaners must be used, use the least toxic ones that will still do the job. Use detergents that contain no phosphorus.
- ❖ Spread filter fabric underneath the object being washed to trap particulates for later disposal. This is in addition to collecting the runoff for disposal.
- ❖ Limit the amount of water you use.

RANGE	TOWNSHIP	SECTION	QUARTER	066	22 /33
04E-	20 N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

2. Landscaping and Vegetation Management Activities, Including Vegetation Removal, Herbicide and Insecticide Applications, Fertilizer Applications, Irrigation, Watering, Gardening and Lawn Care

This broad activity applies to all aspects of landscaping and vegetation management, from small-scale yard maintenance to large-scale commercial landscaping businesses to municipalities maintaining public parks and roadside ditches. It includes practices aimed at controlling unwanted vegetation growth, such as herbicide spraying, cutting or pulling. This can occur on lawns, in gardens and other landscaped areas, as well as roadside ditches. It also applies to all practices aimed at enhancing the growth of vegetation. Fertilizers and insecticides are typically used in this context, as is extensive watering. This activity also covers leaf raking, lawn mowing, shrub and tree pruning and a variety of other lawn care practices.

Businesses involved in pesticide application must comply with Tacoma-Pierce County Health Department regulations and Washington State Department of Agriculture regulations regarding pesticide usage. The BMPs listed below are intended to complement other regulatory requirements. Pierce County maintenance departments for parks, utilities and roads have procedures that utilize these BMPs.

**Pollutants of Concern:** Toxic organic compounds, heavy metals, Chemical oxygen demand (COD), Biochemical oxygen demand (BOD), suspended solids, nutrients, oils, bacteria

**Required BMPs**

The following BMPs or equivalent measures are required of all businesses and public agencies performing landscaping and vegetation management activities:

- ❖ Employees must be educated about the pollution potential of improper pesticide usage, improper disposal of lawn clippings, over fertilization and over watering. Emphasis on proper storage, handling, application and disposal practices is a must.
- ❖ Herbicide, insecticide and fungicide application must not be conducted within 100 feet of surface waters such as lakes, ponds, wetlands and streams. This buffer distance is specified in the Washington State Department of Ecology Stormwater Management Manual for the Puget Sound Basin. All applications must follow manufacturers' recommendations. Pesticides must

RANGE	TOWNSHIP	SECTION	QUARTER	066	23/ 33
04E-	20 N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

not be applied when raining or windy. The use of aquatic herbicides requires a permit from the Department of Ecology on a site-by-site basis.

- ❖ Pesticide containers and fertilizers, whether in open piles or bags, must be stored in protected places when not in use.
- ❖ Areas where soils are temporarily stripped bare for more than two weeks must comply with the requirements in Section 8.5 from The Pierce County Stormwater Management Manual. Call Pierce County Surface Water Management at (253) 798-2725 for a copy.
- ❖ Avoid Planting noxious plant species, such as reed canary grass, purple loosestrife or tansy, particularly near lakes, wetlands and riparian areas. Contact Pierce County/WSU Cooperative Extension at 798-7980 or the Pierce County Weed Control Board at 798 -7263 for information on noxious plants.

**Suggested BMPs**

The following BMPs are not required but can provide additional pollution protection:

- ❖ When watering, you should attempt to minimize the amount of water used. Never water to the point of runoff.
- ❖ Grass clippings, leaves, sticks and other collected vegetation should be composted, ground and used as mulch, or disposed as garbage. Never pile or dump clippings in or near storm drains, streams, lakes, drainage ways, or other water bodies. Several local companies take landscaping and land clearing waste and convert it to a high-quality compost product suitable for landscaping use. See Recycling Services in the yellow pages of your phone book for companies nearest you. Vegetation cutting near open waters and in drainage ditches should be done carefully so that the cut material can be collected. Burning of cut vegetation is no longer an option in the urbanized area of Tacoma and Pierce County due to air quality regulations.
- ❖ Where possible, fertilizer should be worked into the soil rather than dumped on the surface.
- ❖ Sweep driveways, gutters and storm drains to remove accumulations of grass, leaves and twigs after trimming. Dispose of the material by composting, mulching, or recycling.

RANGE	TOWNSHIP	SECTION	QUARTER	066	24 /33
04E-	20 N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

- ❖ Integrated pest management (IPM) is a comprehensive approach to the use of pesticides. IPM minimizes pesticide application and stresses selection of proper products and tailored application rates. It is a sensible long-term strategy rather than a hit-and-run operation, and as such is probably the most effective BMP measure that can be practiced for herbicide, insecticide, and fungicide use.
- ❖ Fertilizers should be applied carefully. Soils should be tested to determine the proper application rate, type of fertilizer and timing for the type of soil and vegetation involved.
- ❖ Use mechanical methods of vegetation removal rather than apply herbicides.
- ❖ One of the most effective measures that can be taken to reduce the necessity for pesticide use, excessive watering, and removal of dead vegetation involves careful soil mixing and layering prior to planting. Quite often, the native vegetation is cleared, leaving the mineral soil exposed underneath. Many people tend to plant directly into this, and then cover with bark mulch. This practice usually results in heavy plant mortality and excessive water usage. By using a topsoil mix or composted organic matter that is mixed into the soil, a transition layer is created that allows for healthier, deeper root development. This can improve the health of the plants, resulting in better disease and insect resistance, and reduced water demand.
- ❖ Mulching mowers are highly recommended. They add organic matter and nutrients directly back to lawns with no disposal hassles.

3. Storage of Liquid Chemicals, Waste Oils, Solvents or Petroleum Products in Portable Containers

This activity applies to businesses and public agencies that store any type of liquid chemicals, waste oils, solvents or petroleum products in portable containers (such as drums). This activity covers permanent storage as well as temporary storage areas at temporary sites. This activity does not apply to businesses that are permitted by the Department of Ecology to treat, store or dispose of dangerous wastes. Storage of all types of flammable liquids must comply with the fire code. Businesses involved in storage of petroleum products must comply with EPA, Ecology and Tacoma-Pierce County Health Department regulations regarding spill control and prevention.

RANGE	TOWNSHIP	SECTION	QUARTER	066	25/ 33
04E-	20 N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

**Pollutants of Concern:** Toxic organic compounds, oils and greases, heavy metals, pH, nutrients, Chemical oxygen demand (COD)

**Required BMPs**

The following BMPs or equivalent measures are required of all businesses and public agencies storing liquid chemicals, waste oils, solvents or petroleum products in portable containers:

- ❖ Liquid chemicals, waste oils and petroleum products shall be stored in such a manner and location that if the container is ruptured or toppled the contents will not discharge, flow, be washed or fall into the storm drainage system, surface waters or groundwater. This may be accomplished by designating a container storage area and providing portable or stationary containment berms or dikes, providing a spill containment sump, secondary containment or other similarly effective measure.
- ❖ Do not store containers in direct contact with the ground.
- ❖ Leaking, cracked, corroded or otherwise deteriorating storage containers must be replaced with containers in good condition. If the liquid chemicals are corrosive, containers made of compatible materials must be used instead of metal drums.
- ❖ Employees must be trained to check for leaks and spills and trained in safe handling techniques.
- ❖ Appropriate cleanup materials must be available in a plainly labeled location near the container storage area, and employees must be trained in proper spill cleanup procedures.
- ❖ Tight-fitting lids must be present on all stored containers. Containers in active use (such as a used oil barrel with a funnel) must be protected from rain.
- ❖ If storm drains could potentially be impacted, use storm drain covers or equivalent containment devices during filling or removal of containers. Collect and recycle, or dispose of properly, all liquids that accumulate before removing the storm drain cover.

**Suggested BMPs**

The following BMPs are not required but can provide additional pollution protection:

- ❖ Cover the designated storage area.

RANGE	TOWNSHIP	SECTION	QUARTER	066	26/ 33
04E-	20 N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

- ❖ Drip pans or absorbent materials should be used beneath all mounted container taps, and also at all potential drip and spill locations during filling and unloading of containers. Any collected liquids or soiled absorbent materials must be recycled or properly disposed of
- ❖ To minimize spills, use funnels to pour liquids into storage containers.
- ❖ Separate funnels should be designated and labeled for different liquids, if applicable.
- ❖ The storage area should be swept and cleaned weekly, but never hosed down to a storm drain.
- ❖ If a sump or holding tank is used for spill containment (not required), sump drains must be inspected weekly to determine if spilled materials need to be pumped.
- ❖ In addition to covering, the designated area should be paved and sloped to a drain, and a sump or holding tank provided to capture all of the drainage.
- ❖ Reuse and recycle waste oils and excess liquids. Check your phone book for the numbers of local waste oil recyclers. For other liquids, call the Industrial Materials Exchange (IMEX) to advertise your waste, which may be someone else's asset. Contact IMEX at (206) 296-4899 or use the IMEX computer bulletin board modem access number at 1 -800-858-6625.
- ❖ Use one or a combination of the following treatment BMPs:
  - Filtration with media designed for removal of petroleum products, if they are the only type of liquid stored.
  - Constructed wetlands.
  - Oil/water separators are highly recommended for treatment of runoff from areas used for storage of petroleum products.

4. Building Repair, Remodeling, Painting and Construction

This activity refers to activities associated with construction of buildings and other structures, remodeling of existing buildings and houses, painting of building exteriors, and general exterior building repair work. Concrete pouring is covered under A3.2 Concrete Pouring and Asphalt Application at Temporary Sites.

RANGE	TOWNSHIP	SECTION	QUARTER		27/
04E-	20 N-	26	04	066	33
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

**Pollutants of Concern:** Toxic hydrocarbons, toxic organics, suspended solids, heavy metals, pH, oils and greases

**Required BMPs**

The following BMPs or equivalent measures are required of all businesses engaged in building repair, remodeling, painting and construction:

- ❖ Employees must be educated about the need to control site activities to prevent stormwater pollution, and also trained in spill cleanup procedures.
- ❖ Spill cleanup materials, appropriate to the chemicals being used on site, must be available at the work site at all times.
- ❖ The work site must be cleaned up at the end of each workday, with materials such as paints and solvents put away indoors or covered and secured so that vandals will not have access to them.
- ❖ The area must be swept daily to collect loose litter, paint chips, grit, and dirt.
- ❖ Absolutely no substance can be dumped on pavement, on the ground, in or toward storm drains, regardless of its content, unless it is water only.
- ❖ Ground or drop cloths must be used underneath outdoor painting, scraping, and sandblasting work. Ground cloths, buckets, or tubs must also be used anywhere that work materials are laid down.
- ❖ Paint brushes and other tools that are covered with water-based paints must be cleaned in sinks connected to sanitary sewers or in portable containers that can subsequently be dumped into a sanitary sewer drain. Brushes and tools covered with non-water-based paints, finishes, or other materials must be cleaned in a manner that enables collection of used solvents for recycling or proper disposal.
- ❖ Storm drain covers or similarly effective devices must be used if dust, grit, wash water, or other pollutants may escape the work area. This is particularly necessary on rainy days. The cover or containment device shall be placed over the storm drain at the beginning of the workday and accumulated dirty runoff and solids must be collected and disposed of before removing the cover at the end of the day.

RANGE	TOWNSHIP	SECTION	QUARTER	066	28/ 33
04E-	20 N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

**Suggested BMPs**

The following BMPs are not required but can provide additional pollution protection:

- ❖ Recycle materials whenever possible.
- ❖ Light spraying of water on the work site can control some of the dust and grit that can blow away. Oils must never be used for dust control. Never spray to the point of runoff from the site.
- ❖ Activities such as paint mixing, and tool cleaning should occur over a ground cloth or within a containment device such as a tub.
- ❖ Catch basin filter inserts should be considered if work will be ongoing for an extended period of time or if significant amounts of hydrocarbons, oils and greases, heavy metals, or suspended solids are expected in site runoff.

5. Vehicle and Equipment Parking and Storage

This activity applies to all types of parking lots (commercial, public and private), fleet vehicle lots and yards (including rental car lots and car dealerships), equipment sale and rental lots, and driveways. Because this activity is so difficult to manage in terms of pollution control, the BMPs listed below, if used throughout the County and City, will give a cumulative large benefit in terms of pollution protection.

**Pollutants of Concern:** Toxic hydrocarbons, toxic organics, oils and greases, heavy metals, nutrients, suspended solids, pH

**Required BMPs**

The following BMPs or equivalent measures are required of all businesses and public agencies with parking lots and driveways:

- ❖ The use of soaps or detergents to wash vehicles or equipment in any area that drains to a storm drain, ditch, stream, or other water body is not allowed. Soapy wash waters must discharge to the sanitary sewer or suitable treatment system. Call Pierce County Water Resources Permits at 798-2737 for information on connecting to the sewer.

RANGE	TOWNSHIP	SECTION	QUARTER	066	29/ 33
04E-	20 N-	26	04		
DOCUMENT NUMBER				SERIAL NUMBER	PAGE NUMBER

- ❖ Parking areas, storage areas, and driveways shall be swept (not hosed to a storm drain) at least once per month to collect dirt, litter and debris. Make sure to dispose of these materials properly.
- ❖ Gutters, drains and catch basins must be checked frequently for evidence of dirt and debris, and cleaned as needed. Storm drain inlets and gutters on the property must be cleaned at least once per month, without hosing sediments and other debris into the storm drain. Catch basins should be cleaned a minimum of twice per year, and more frequently if needed.
- ❖ An oil/water separator or oil absorbent pillow insert for catch basins or other treatment BMP must be installed for treatment of runoff if other measures do not sufficiently reduce the problem of contaminated runoff.

**Suggested BMPs**

The following BMPs are not required but can provide additional pollution protection:

- ❖ Garbage cans with lids should be provided to reduce parking lot litter.
- ❖ Divert runoff to vegetated areas near the parking lot.
- ❖ Through the use of incentives and discounts, businesses should encourage employees and customers to carpool and use public transit.
- ❖ Implement one of the following stormwater treatment BMPs:
  - Catch basin filter insert
  - Infiltration basin
  - Wet pond or vault
  - Constructed wetland
  - Vegetated biofilter
  - Filtration

**City of Puyallup - Stormwater BMP Facilities Inspection and Maintenance Log**

Facility Name \_\_\_\_\_  
 Address \_\_\_\_\_  
 Begin Date \_\_\_\_\_ End Date \_\_\_\_\_

Date	BMP ID#	BMP Facility Description	Inspected by:	Cause for Inspection	Exceptions Noted	Comments and Actions Taken

**Instructions:**  
 Record all inspections and maintenance for all treatment BMPs on this form. Use additional log sheets and/or attach extended comments or documentation as necessary. Submit a copy of the completed log with the Annual Independent Inspectors' Report to the City, and start a new log at that time.  
 BMP ID# — Always use ID# from the Operation and Maintenance Manual.  
 Inspected by — Note all inspections and maintenance on this form, including the required independent annual inspection.  
 Cause for inspection — Note if the inspection is routine, pre-rainy-season, post-storm, annual, or in response to a noted problem or complaint.  
 Exceptions noted — Note any condition that requires correction or indicates a need for maintenance.  
 Comments and actions taken — Describe any maintenance done and need for follow-up.
