$$= 1.402 \text{ in}$$

$$\beta = 1 - (x_o / r_o)^2$$

$$= 1.000$$

Fe is taken as the smaller of Fe1 and Fe2:

$$F_{e1} = \pi^2 E / (Kl/r)_{max}^2$$

$$= 9.15 \text{ KSI}$$

$$\sigma_{ex} = \pi^2 E / (K_x L_x / r_x)^2$$

$$= 9.15 \text{ KSI}$$

$$F_e = 9.15 \text{ KSI}$$

$$F_y / 2 = 18.00 \text{ KSI}$$

Since,  $F_e < F_y / 2$

Then,  $F_n = F_e$

$$= 9.15 \text{ KSI}$$

$$P_n = A_{eff} \times F_n$$

$$= 8,873 \text{ LB}$$

$$\Omega_c = 1.8$$

$$P_a = P_n / \Omega_c$$

$$= 4,929 \text{ LB}$$

$$P / P_a = 0.18 > 0.15$$

Thus, check:  $P / P_a + (C_{m_x} * M_x) / (M_{ax} * \mu_x) \leq 1.0$

$$P / P_{a0} + M_x / M_{ax} \leq 1.0$$

$$P_{n0} = A_e \times F_y$$

## Wide Span Fixtures

### SCOPE:

The purpose of this analysis is to show that the following light duty storage fixtures complies with the specifications set forth in Section 1613 of the 2021 IBC and Section 15.5.3 of ASCE 7-16.

**The storage racks are prefabricated and are to be field installed only without any field welding.**

### PARAMETERS:

The fixtures will be analyzed as a braced steel storage rack system.  
The system will be analyzed for seismic loading utilizing the following equation:

$$\begin{aligned}V &= C_s \times W \\C_s &= S_{DS} \times I / R \\S_{DS} &= 2/3 \times F_a \times S_s \\I &= 1 \\R &= 4 \\\rho &= 1 \\\beta &= 1 \\F_a &= \mathbf{1.2} \\S_s &= \mathbf{1.26}\end{aligned}$$

### SPECIFICATIONS:

Steel -  $F_y = 50,000$  psi

Bolts - ASTM A307 unless otherwise noted

Anchors -  $3/8" \varnothing \times 2-3/8"$  NOM. EMBED. HILTI KB1 (IAPMO #UES ER-678)

**Beam Analysis**

Beam to column connections provide adequate moment capacity to stabilize the system, although it does not provide full fixity. Thus, the beams shall be analyzed assuming partial end fixity. In justifying the beam to column moment connection, the partial end fixity moment will be added to the Longitudinal frame moment for the analysis of the connection.

% END FIXITY = 10 %

Effective Moment for Partially Fixed Beam

For simply supported beams, the maximum moment at the center is given by  $wL^2/8$ . An assumption of partial fixity will decrease the maximum moment by the following method.

$\phi = 0.1$

$M_{center} = M_{center}(simple\ ends) - \phi * M_{center}(fixed\ ends)$   
 $= wL^2/8 - (0.1 * wL^2/12)$
