

Engineer's Certification for the referenced project:

Project Number: 03-143,
Project Name: Cascade Christian Junior High
City of Puyallup Permits; E-16-0150 & E-20-0261

This project storm was design by the Abbey Road group Land Development Services Company.

The Storm was approved by the City of Puyallup under Civil Permits # E-16-0150 & E-20-0261.

The storm line along the front of the north side of the future building was removed from the scope of work for this permit (See Separate Plan Change Request removing this Roof Drain line from the present civil requirements.

Based on the above and the approved Civil plans the only other storm work was a roof drain connection to the stub at the building pad site South East Cornor of the site and the storm roof drain system from that Storm Stub to the South and east of the gym building to pick up roof drains.

This certification is for the prior existing roof drain connection to the stub at the building pad site South East of the site and the storm roof drain system from that Storm Stub to the South and east of the gym building to pick up roof drains.

I due certify that the prior existing roof drain connection from the stub at the building pad site South East corner of the pad and the storm roof drain system from that Storm Stub to the South and East of the gym building to pick up roof drains has been installed per specifications based on the final lay out of the Gym Building per the approved building permit.

I have reviewed and understand the approved storm design and the installation conforms to the approved design.
