

TECHNICAL MEMORANDUM

Project: Puyallup High School Building-02 Demo and Portable Placement

Subject: Updated Transportation Analysis

Date: April 4, 2024

Author: Tod S. McBryan, P.E.

The Puyallup School District plans to demolish Puyallup High School's (PHS) library-science building (known as Building-02) in spring or summer of 2024. This memorandum presents an updated description of the proposal and a summary of the estimated net change in school trip generation. It reflects changes to address comments from the City of Puyallup (City) on the prior traffic scoping analysis.¹ Please contact Tod McBryan (206) 527-8410 with any questions regarding this memorandum.

1. Project Description

Figure 1 shows the location on campus and the interior floor plans of Building-02, which is planned to be demolished (25,324 square feet gross floor area (sfgfa)). As shown, the project would remove nine existing classrooms and the library space. To temporarily replace some of those spaces, the District proposes to locate three double-portable buildings (with two classrooms in each; three portables have a total of 5,376 sfgfa) on vacant property located on the western half of the block bounded by 7th and 8th Streets NW, 2nd Avenue NW, W Main Street. Figure 2 shows the proposed location of the new portable buildings.

If no other suitable space within the existing remaining buildings is available, one of the newly placed portables or another existing portable already on the campus would be converted for use as a library. As a result, the demolition and portable placement would result in a net decrease of either three or four classrooms for the overall campus (nine classrooms removed, and five or six new classrooms added). Therefore, the project would reduce the overall student capacity of PHS. For capacity determinations associated with general education classrooms, the District assumes 26.6 students each.² As a result, the proposed project would result in a net decrease in overall PHS capacity by either 80 or 106 students (depending on where the temporary library is located).

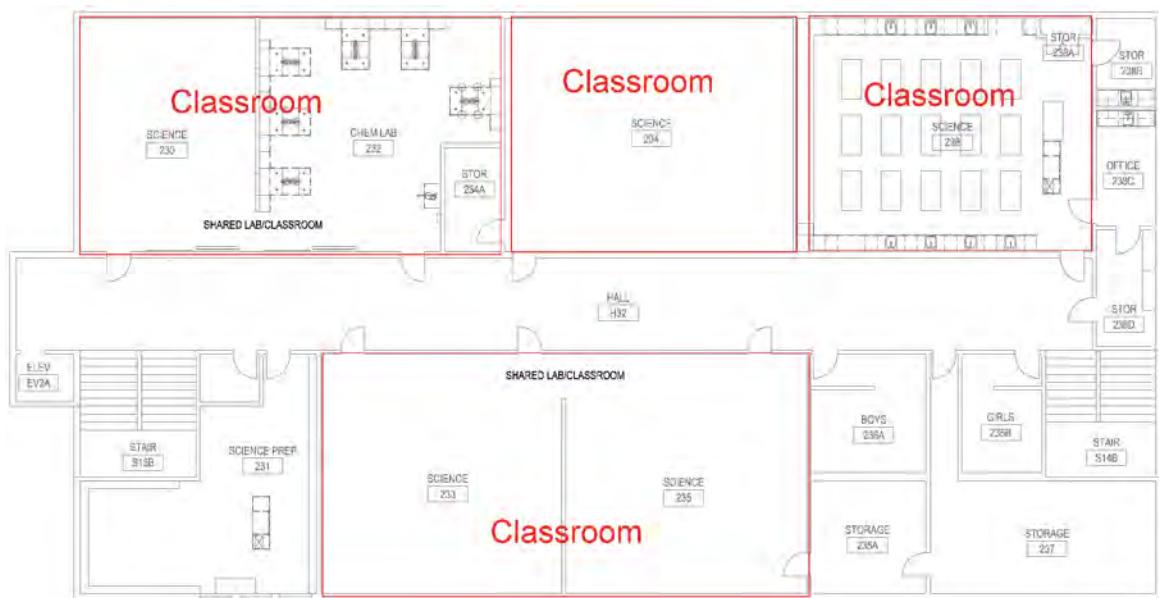

Current PHS enrollment (as of October 2023) is about 1,600 students³ and the existing and projected enrollment would be accommodated in the near-term by the proposed portable classrooms. However, the District intends to fully recover the lost capacity in its next phase of construction at Puyallup High School, included in the District's six-year capital facilities plan.

2. Project Net Trip Generation

The net change in school trip generation was estimated using rates published by the Institute of Transportation Engineers (ITE) in the current version of its *Trip Generation Manual*.⁴ Average trip rates per student were used instead of trip equations because they result in smaller estimated decreases in peak hour trips. Table 1 summarizes the ITE trip rates for High Schools (Land Use Code 525).

Table 1. ITE Trip Generation Rates and Equations – High School (Land Use 525)

	Weekday Daily In Out	AM Peak Hour of Adjacent Street		PM Peak Hour of Generator		PM Peak Hour of Adjacent Street	
		In	Out	In	Out	In	Out
		Rates	1.94 trips / student	0.52 trips / student	0.32 trips / student	0.14 trips / student	
In / Out %	50% 50%	68%	32%	32%	68%	48%	52%

Source: *ITE, Trip Generation Manual, 11th Edition, September 2021*,

The rates above were applied to the capacity associated with each project component: the addition of new portables and the removal of Building-02. Table 2 summarizes the estimated net change in trip generation at Puyallup High School assuming a net reduction of three classrooms (and 80 students of capacity) that would occur with the demolition and portable placement project. If a portable on campus is re-purposed as a temporary library, the reductions in trip generation would be larger (-208 daily, -56 AM, -34 PM peak of generator, and -15 PM).

Table 2. PHS Building-02 Demolition and Portable Placement – Trip Generation Summary

Site Condition	Students	Daily	AM Peak Hour of Adjacent Street			PM Peak Hour of Generator			PM Peak Hour of Adjacent Street		
			In	Out	Total	In	Out	Total	In	Out	Total
Add New Portables ¹	160	310	56	27	83	35	16	51	15	7	22
Remove Building-02 ²	-240	-466	-85	-40	-125	-52	-25	-77	-23	-11	-34
Net Change	-80	-156	-29	-13	-42	-17	-9	-26	-8	-4	-12

Source: Heffron Transportation, Inc., November 2023 based on ITE Trip Generation rates (see Table 1).

1. Capacity of six proposed portables.

2. Capacity of Building-01 to be demolished (none classrooms).

3. Pedestrian Crossings of 7th Street NW

The project would place three double portables (up to six classrooms) on District property located west of 7th Street NW, where there are already nine single portable classrooms. As a result, there would be proportional increases in pedestrian crossings by students and staff between the 15 portables and the other school buildings located east of 7th Street NW. These crossings already occur daily as students, staff, and visitors regularly walk between designated school parking lots and school buildings as well as among buildings between classes (there are six class changes per day).

To mitigate the potential impacts of additional pedestrian crossings, the District and City have agreed to pilot a temporary closure 7th Street NW and a small segment of W Main. The closure would extend about two blocks from 3rd Avenue NW to W Main and around the 90-degree bend on W Main to 7th Street NW. The temporary closure would be accomplished with removable barriers with signage that is compliant with the *Manual on Uniform Traffic Control Devices (MUTCD) for Streets and Highways*.⁵

⁴ ITE, 11th Edition, September 2021.

⁵ USDOT and Federal Highway Administration, 2009 Edition including Revisions 1, 2, and 3, Last Updated July 2022.

Access by emergency vehicles would be retained. The temporary closure would be a condition of the Conditional Use Permit (CUP) for the portable placement project. Figure 3 shows a sketch of the proposed temporary closure. The City requested analysis of the anticipated traffic impacts of this closure, which is provided in the following section.

4. Traffic Analysis

The closure of 7th Street NW between 3rd Avenue NW and W Main would change vehicular traffic patterns for both school trips and non-school trips that may use those roadway segments. New 72-hour machine counts were performed along six key roadways near Puyallup High School. The counts were performed by Idax Data Solutions, Inc. (a traffic count data vendor), from Tuesday, January 23, through Thursday, January 25, 2024 at the following locations:

- 7th Street NW north of 3rd Street NW;
- 5th Street NW north of 2nd Street NW;
- 8th Street NW north of W Main;
- 9th Street NW north of W Main;
- 2nd Avenue NW between 7th and 8th Streets NW; and
- 6th Street NW north of W Pioneer.

The data were compiled and 15-minute volumes were averaged across the three-day count period. Figure 4 shows charts of the hourly volumes at each location; each chart uses the same scale to demonstrate the range of volumes on each of the roadways. The total daily volume using 7th Street NW north of 3rd Avenue NW is about 22% of the volume that uses 5th Street NW. The volumes on the other four streets range from 2% to 7% of the 5th Street volume.

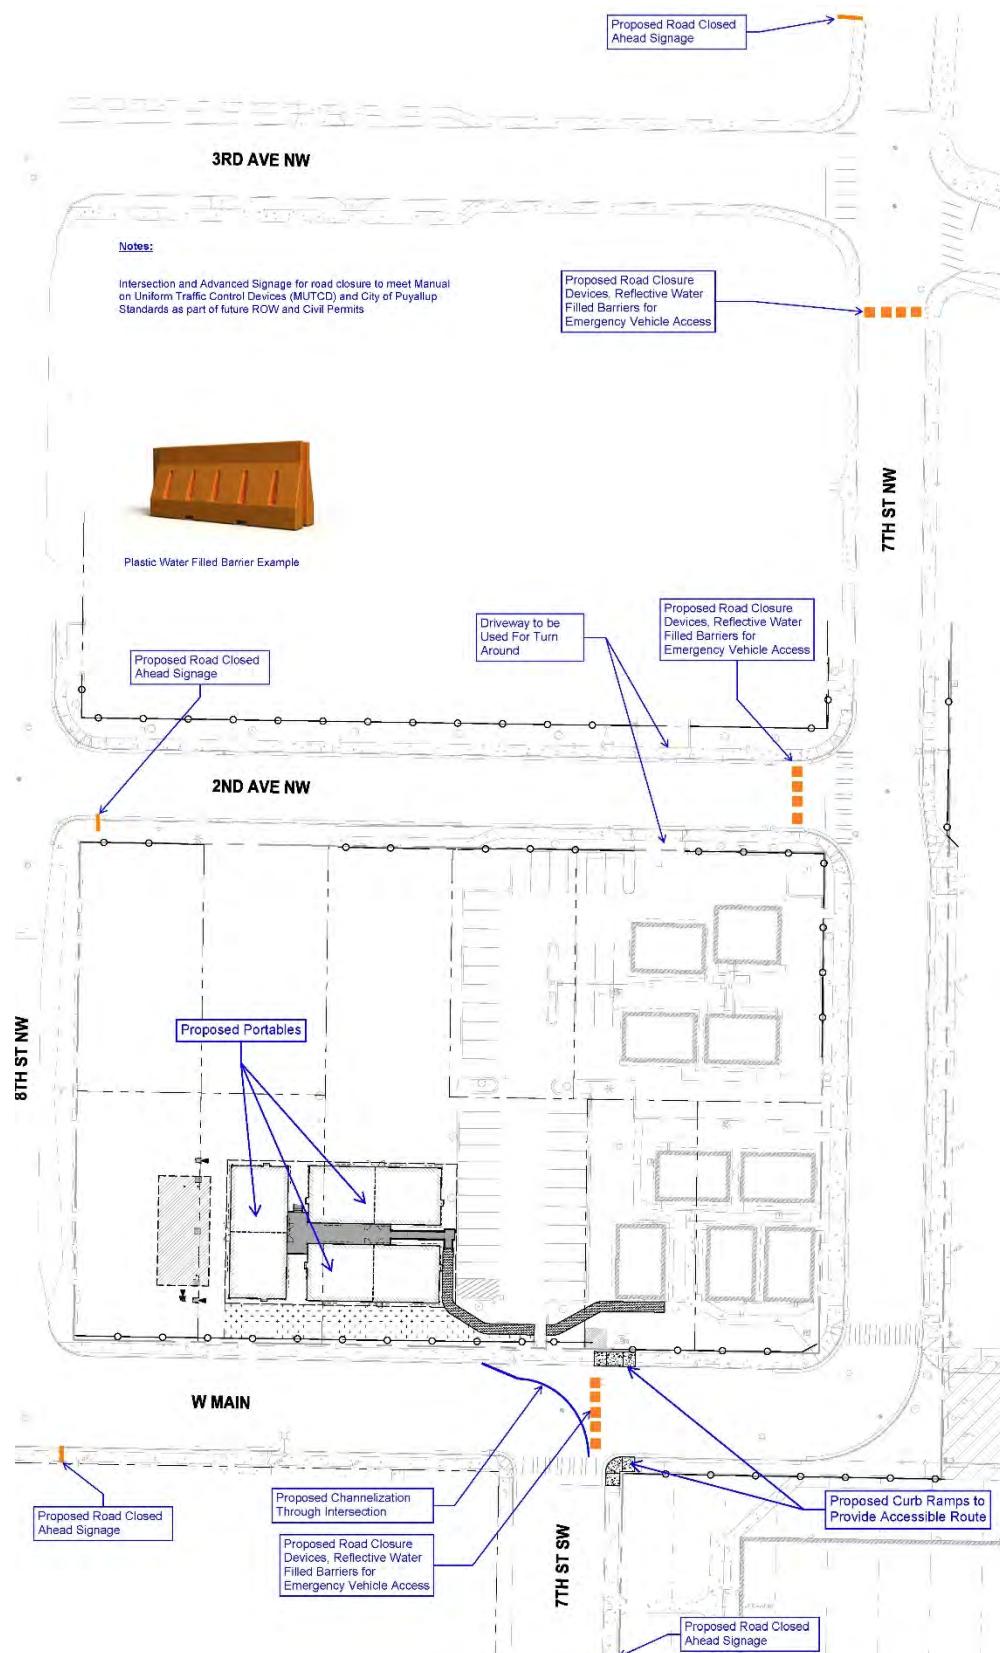

In addition to the 72-hour machine counts, peak period video turning movement counts were taken at five key locations that could be affected by the closure of 7th Street NW to vehicle traffic. The counts were also performed by Idax on Wednesday, January 24, 2024 at the following intersections from 7:00 to 9:00 A.M. and from 2:00 to 6:00 P.M. The count data sheets are provided in Attachment A.

- 8th Street NW / 3rd Street NW;
- 7th Street NW / 3rd Street NW;
- 7th Street NW / 2nd Street NW;
- 7th Street NW / W Main; and
- 7th Street NW / W Pioneer.

School hours are 8:25 A.M. to 2:55 P.M. The counts indicate that the morning (AM) peak hour occurs from 7:30 to 8:30 A.M., the afternoon dismissal peak hour occurs from 2:30 to 3:30 P.M., and the commuter PM peak hour of the adjacent roadways occurs from 4:30 to 5:30 P.M. Figure 5, Figure 6, and Figure 7 show the existing peak hour vehicular turning movement volumes during the AM, afternoon, and PM peak hours, respectively.

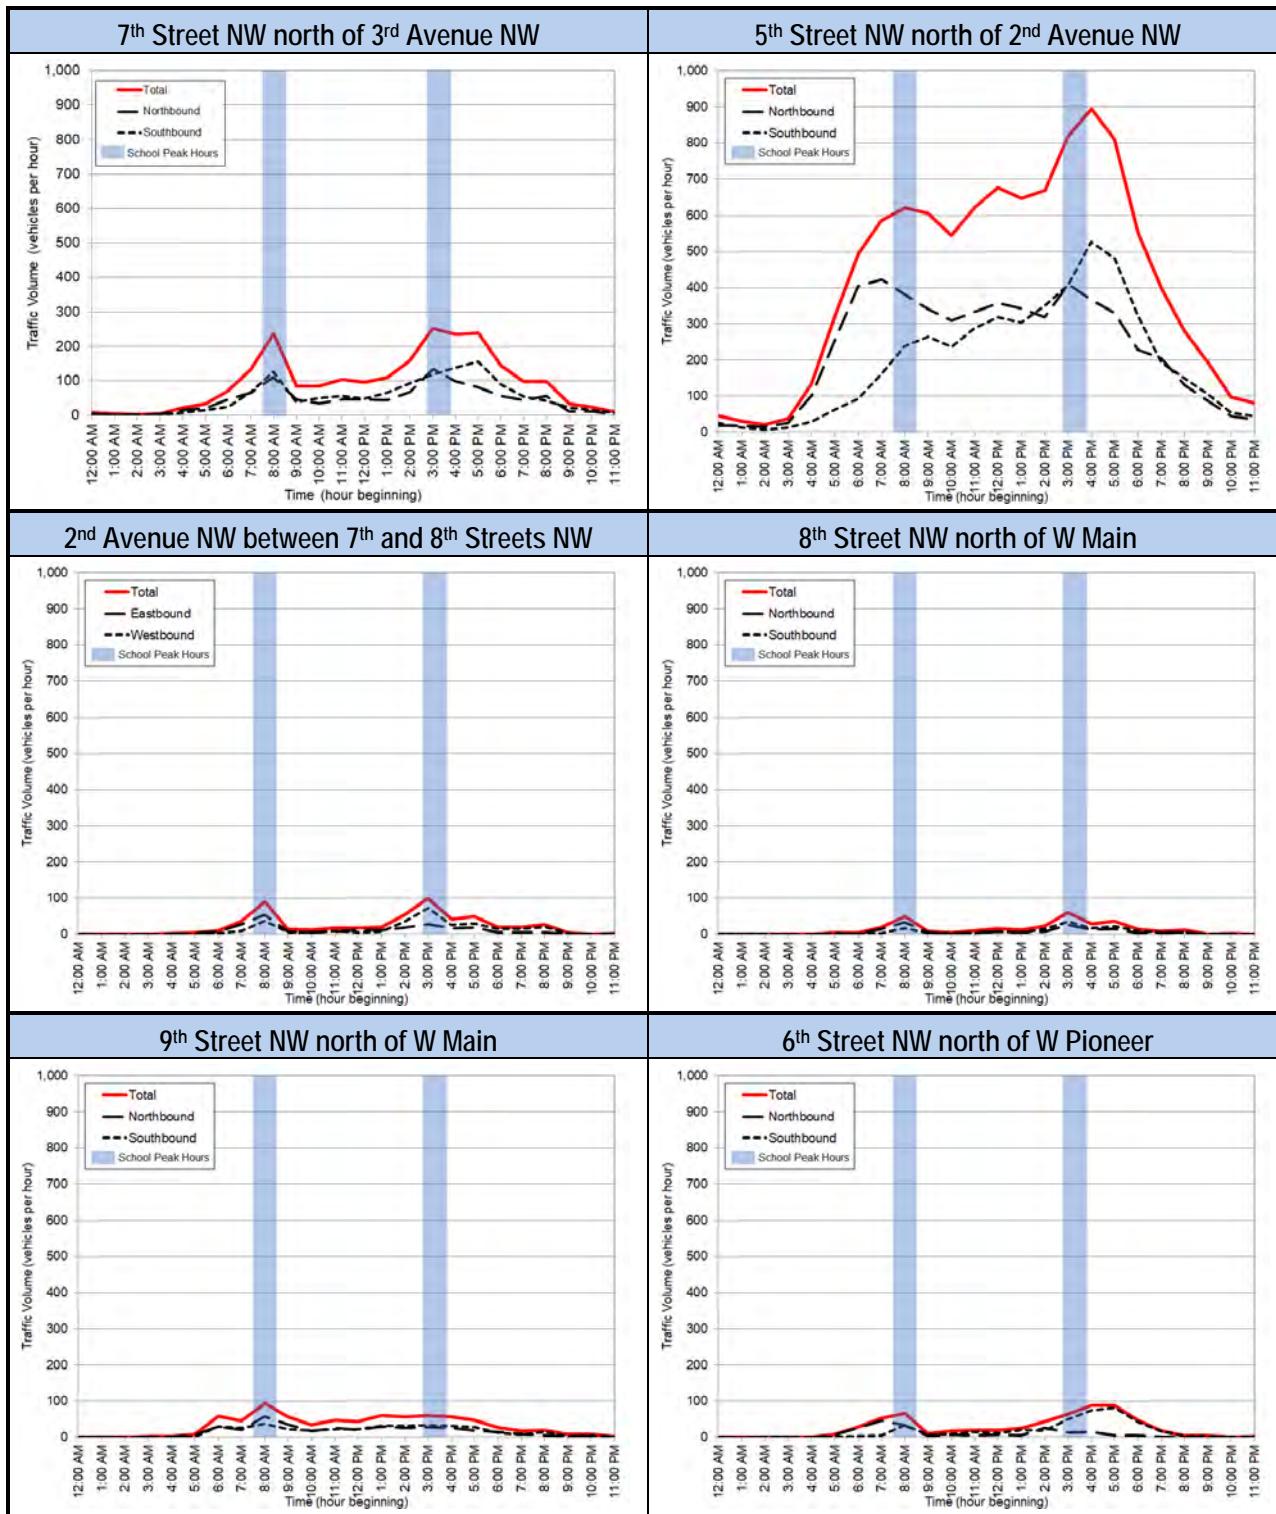

The existing peak hour turning movement counts were examined to estimate how traffic might redistribute to the surrounding roadway network with the street closure. For the three existing volume figures, the values shown in red denote the intersection movements that would be diverted with the proposed street closure. Much of the traffic that now uses 7th Street NW during the peak hours is school related—either part of a drop-off/pick-up trip or a trip to reach school parking lots. Most of this traffic would continue to use the next closest street that serves these functions, which is 8th Street NW. Some of the traffic that now uses 7th Street NW is non-school-related through traffic. To present a potential worst-case condition, all of the through traffic was also assumed to divert to 8th Street NW even though some traffic could disperse to other streets on the grid. Concentrating the diverted trips to 8th Street NW presents a worst-case condition for the intersections along that route. Figure 8, Figure 9, and Figure 10 show the estimated diverted trips with the temporary street closure for the AM, afternoon, and PM peak hours, respectively. As shown, the road closure is estimated to shift between 60 and 150 northbound trips per hour and between 50 and about 125 southbound trips to 8th Street NW.

5. Operational Impacts of Closure

The potential impacts of the roadway closure were evaluated using traffic operations analysis. Traffic operations are evaluated based on level-of-service (LOS), which is a qualitative measure used to characterize intersection operating conditions. Six letter designations, "A" through "F," are used to define level of service. LOS A is the best and represents good traffic operations with little or no delay to motorists. LOS F is the worst and indicates poor traffic operations with long delays. Levels of service for the study area intersections were determined using methodologies established in the *Highway Capacity Manual (HCM), 6th Edition*.⁶ Attachment B summarizes HCM level of service thresholds. The City's adopted minimum operational standard for all intersections in the City is LOS D.⁷

Table 3 summarizes levels of service for the existing (2024) morning arrival, afternoon dismissal, and PM peak hours for the study-area intersections. As shown, all five study-area intersections currently operate at LOS A overall with all but one movement at LOS C or better during all three peak hours. The southbound movement at the 7th Street NW / W Pioneer intersection operates at LOS F in the afternoon peak hour and LOS E in the PM peak hour. The LOS calculation sheets are provided in Attachment C.

Table 3. Level of Service – Existing (2024) and Forecast-with-Road-Closure Conditions

Intersections	AM Peak Hour (7:30 to 8:30 A.M.)				Afternoon Peak (2:30 to 3:30 P.M.)				PM Peak Hour (4:30 to 5:30 P.M.)

a. Level of service.

b. Average seconds of delay per vehicle.

c. n/a – Not applicable; no volumes with street closure,

⁶ Transportation Research Board 2016.

⁷ City of Puyallup, *Puyallup Comprehensive Plan – Transportation Element*, 2015.

The road closure and the assumed traffic shifts would result in increases in delay at some locations, the largest of which is forecast for the overall 7th Street NW/3rd Avenue NW intersection during the afternoon peak hour. The increase in delay would occur due to the elimination of southbound through volumes, which occur with negligible delays and reduce the overall average intersection delay. The analysis also shows that with the street closure and diversions, the southbound approach at the 7th Street NW / W Pioneer intersection is forecast to continue operating at LOS F. However, it is likely that some of the through traffic would divert to other streets on the grid where turning onto W Pioneer is easier, such as at 9th Street NW or 5th Street NW. The potential diversions to those other streets would be small. All other intersections are forecast to continue operating at acceptable levels of service. Based on these results, the temporary road closure is not anticipated to result in significant adverse impacts to traffic operations in the school vicinity.

As required by the City, the District will perform post closure monitoring traffic counts and analysis during the first school year that the temporary closure is in place. These counts will be performed to evaluate what, if any, impact the closure has on the adjoining street grid compared to the pre-closure counts and analysis. The post-closure counts and analysis will be provided to the City for further review of the relative merits of making the closure permanent.

6. Parking Demand Displacement

The planned road closure would also displace on-street parking demand that currently occurs along the affected segments of 7th Street NW and W Main. Parking demand counts were performed at these locations across multiple times on two days—Thursday, January 18 and Thursday, March 14, 2024. The counts on January 18 were performed during school at 10:00 A.M. and 2:00 P.M., and after school at 3:30 P.M.; counts on March 14 were performed at 7:00 A.M. before school and 10:00 A.M. during school. Table 4 shows the parking demand count results, which indicate that the affected roadway segments serve school-related parking demand ranging from 1 vehicle (before school hours) to 20 vehicles in the early afternoon before school dismissal. Parking counts of the school's seven off-street parking lots were conducted on the same days and at the same times. Those counts indicate that between 105 and 142 unused stalls during the school day. Therefore, the parking demand that would be displaced by the planned road closure can be accommodated by off-street school lots. It is noted that some drivers may still choose to park on-street for convenience.

Table 4. On-Street Parking Demand Summary

Street	Segment (between)	Side	Parking Demand Count Times and Days				
			7:00 A.M. 3/14/2024	10:00 A.M. 1/18/2024	2:00 P.M. 3/14/2024	2:00 P.M. 1/18/2024	3:30 P.M. 1/18/2024

Source: Heffron Transportation, Inc., April 2024.

7. Other Road Closure Considerations

Currently, three Special Education (SPED) school buses use the south side of W Main east of 7th Street NW for student load/unload activities. Three other SPED buses use the east side of 7th Street NW south of W Main. The District will re-route the three buses that use W Main to either the existing school bus load zone on 7th Street NW south of W Main or to the east side of the school on 6th Street NW, where all other general education buses load and unload.

The District will continue coordinating with City staff to develop and implement the temporary road closure, including right-of-way improvements and MUTCD signage that may be required.

8. Findings

The following summarizes the analysis and findings of the analysis.

- The proposed building demolition and placement of portables would result in a net decrease in school capacity and no new school traffic generation.
- The relocation of students to the new portables would introduce additional pedestrian crossings of both 7th Street NW and W Main.
- Based on counts and observations of 7th Street NW and W Main, high volumes of pedestrian crossings already occur during morning arrival, during class period changes, during afternoon dismissal, and after-school during the commuter PM peak period.
- To mitigate potential operational and safety impacts of the added pedestrian crossings, the City and District have agreed to pilot a temporary closure of 7th Street NW and a short segment of W Main near the portable placement area.
- The road closure is expected to shift some school-generated and background traffic to other roadways in the local vicinity, with most assumed to shift to 8th Street NW.
- The shift in traffic would add delay to some locations, but would not result in significant adverse impacts to local traffic operations.
- School-generated parking demand that would be displaced from the closed roadway segments can be accommodated in off-street school lots.
- The District will perform post closure monitoring and analysis during the first school year that the temporary closure is in place. Post-closure counts and analysis will be provided to the City for further review of the relative merits of making the closure permanent.
- The District will coordinate with City staff to develop and implement the temporary road closure, including right-of-way improvements and MUTCD-compliant signage that may be required.
- No other transportation mitigation should be required.

Level of Service Definitions

Attachment B

Level of Service Definitions

Levels of service (LOS) are qualitative descriptions of traffic operating conditions. These levels of service are designated with letters ranging from LOS A, which is indicative of good operating conditions with little or no delay, to LOS F, which is indicative of stop-and-go conditions with frequent and lengthy delays. Levels of service for this analysis were developed using procedures presented in the *Highway Capacity Manual, Sixth Edition* (Transportation Research Board, 2016).

Unsignalized Intersections

For unsignalized intersections, level of service is based on the average delay per vehicle for each turning movement. The level of service for all-way stop or roundabout-controlled intersections is based upon the average delay for all vehicles that travel through the intersection. The level of service for a one- or two-way, stop-controlled intersection, delay is related to the availability of gaps in the main street's traffic flow, and the ability of a driver to enter or pass through those gaps. Table B-1 shows the level of service criteria for unsignalized intersections from the *Highway Capacity Manual, Sixth Edition*.

Table B-1. Level of Service Criteria for Unsignalized Intersections

Level of Service	Average Control Delay per Vehicle
A	0 – 10 seconds
B	> 10 – 15 seconds
C	> 15 – 25 seconds
D	> 25 – 35 seconds
E	> 35 – 50 seconds
F	> 50 seconds
